Furthermore, it is likely that we will continue to enter into related party transactions in the future. There cannot be assurance that such transactions, individually or in the aggregate, may have an adverse effect on our financial condition and results of operations. However, Our Company in its subsequent financing agreement with BOI has again created charge over its complete plant and machinery and no such disclosure has been provided to the BOI in respect of the first charge in favour of SIDBI. In such circumstances both the banks may terminate their respective financing agreements for violation of terms and conditions mentioned therein.

20. Our Company have availed unsecured loans from related parties and others which are repayable on demand.

We have outstanding unsecured loans aggregating to ₹ 56.50 Lacs as on November 30, 2013 from financial institutions, related parties and others. These unsecured loans may be re-called at any time by these Parties. In the event that these loans are required to be re-paid on a short notice, our Company may have to arrange for additional funds which may impact our financials. For further details in relation to the unsecured loans, please refer the chapter "Financial Statements" beginning on page 137 of the Prospectus.

21. Our lenders have charge over our movable and immovable properties in respect of finance availed by us.

We have secured our lenders by creating charge over our movable and immovable properties. In the event of our default in repayment of the loans availed by us and any interest thereon, our properties may be forfeited by lenders. For further information on the financing and loan agreements along with the total amounts outstanding; please refer to Annexure V-A of section titled "Financial Information" on page 137 of this Prospectus.

22. We propose to use the part of Issue Proceeds towards repayment of Channel Financing Arrangement obtained from Aditya Birla Finance Limited, against the stock purchased from Hindalco Industries Limited (Unit: Birla

Copper) and to meet the issue expenses and will use the same according to our deployment schedule. Funds raised from this Issue may remain idle for some time pending deployment in the above stated objects.

We intend to use the part of Issue Proceeds towards repayment of Channel Financing Arrangement obtained from Aditya Birla Finance Limited and to meet the issue expenses. The deployment of the funds is based on certain assumptions and strategy which our Company intends to implement in future. The funds raised from the Issue may remain idle on account of change in assumptions, market conditions, strategy of our Company, etc. For further details on the use of the Issue Proceeds, please see section “Objects of the Issue” beginning on page 58 of this Prospectus.

23. Our manufacturing activities are dependent upon availability of skilled and unskilled labour.

We do not have any permanent arrangement of labour and recruitments are made on daily basis as per requirements. Our manufacturing activities are dependent on availability of skilled and unskilled labour. Non-availability of labour at any time or any disputes with them may affect our production schedule and timely delivery of our products to customers which may adversely affect our business and result of operations.

24. Strikes, work stoppages or increased wage demands by our employees or any other kind of disputes with our employees could adversely affect our business and results of operations.

Our Company is exposed to strikes and other industrial actions. As on the date, our Company has 25 full-time employees including workers at our manufacturing units. We expect a substantial increase in number of employees in the future. At present, we enjoy a good relationship with our employees. However, there can be no assurance that we may not experience disruptions in our operations due to disputes or other problems with our work force such as strikes, work stoppages or increased wage demands that may adversely affect our business and results of operations.

25. We could be harmed by employee misconduct or errors that are difficult to detect and any such incidences could adversely affect our financial condition, results of operations and reputation.

Employee misconduct or errors could expose us to business risks or losses, including regulatory sanctions and serious harm to our reputation. There can be no assurance that we will be able to detect or deter such misconduct. Moreover, the precautions we take to prevent and detect such activity may not be effective in all cases. Our employees and agents may also commit errors that could subject us to claims and proceedings for alleged negligence, as well as regulatory actions on account of which our business, financial condition, results of operations and goodwill could be adversely affected.

26. Delay in raising funds from the IPO could adversely impact the implementation schedule.

The objects of our proposed Initial Public Issue, as detailed in the section titled “Objects of the Issue” are to repay the loan (Channel Financing Arrangement) taken from Aditya Birla Finance Limited. Any failure or delay on our part to mobilize therequired funds from the Issue Proceeds may continue to attract higher financial cost (Interest on said loan) thus adversely affecting our cash flows and results of operations.

27. Our Promoters / Directors / Key Management Persons have given personal guarantees and have secured their personal properties in relation to debt facilities provided to us.

The Promoters and Key Management person of our Company namely, Mrs. Kumkum Tentiwala, have secured personal properties and our promoters and KMP's Mr. Radha Pad Tentiwala, Mr. Neelesh Tentiwala and Mrs. Kumkum Tentiwala have provided personal guarantee in relation to our secured debt facilities availed from Bank of India & National Small Industries Corporation Limited. In an event our Promoters/ Directors withdraw or terminates his/their guarantee/s or security of personal properties, the lender for such facilities may ask for alternate guarantee/s or securities or for repayment of amounts outstanding under such facilities, or even terminate such facilities. We may not be successful in procuring guarantee/s or collateral securities satisfactory to the lender and as a result may need to repay outstanding amounts under such facilities or seek additional sources of capital, which could adversely affect our financial condition. For more information please see the chapter titled "Financial Indebtedness" beginning on page 159 of this Prospectus.

28. Credit facility availed by us from Banks may be recalled or revoked at any time.

Pursuant to certain loan facilities availed by us, the bank reserves the right to recall and /or revoke the facilities in full or in parts without notice or giving any reason. We cannot assure you that we will have adequate funds at all times to repay credit facility and may also be subject to the payment of higher penal interest. Moreover, our ability to borrow and the terms of our borrowings depend on our financial condition, the stability of our cash flows and our capacity to service debt

in a rising interest rate environment. We may not be successful in obtaining these additional funds in a timely manner, or on favourable terms or at all, which could adversely affect our results of operations. For further details, see “Financial Indebtedness” on page 159 of this Prospectus.

29. *We cannot assure you that we will be able to secure adequate financing in future on acceptable terms, in time, or at all.*

We may require additional funds in connection with future business expansion and development initiatives. In addition to the our existing available funds, we may need additional sources of funding to meet these requirements, which may include entering into new debt facilities with lending institutions or raising additional debt in the capital markets. If we decide to raise additional funds through the incurrence of debt, our interest obligations will increase, and we may be subject to additional covenants. Such financings could cause our debt to equity ratio to increase or require us to create charges or liens on our assets in favour of lenders. We cannot assure you that we will be able to secure adequate financing in the future on acceptable terms, in time, or at all. Our failure to obtain sufficient financing could result in the delay or abandonment of any of our business development plans and this may affect our business and future results of operations.

30. *Our insurance coverage may not be adequate to protect us against certain operating hazards and this may have a material adverse effect on our business.*

Operating and managing a business involves many risks that may adversely affect our operations and the availability of insurance is therefore important to our operations. In addition, our Company cannot be certain that the existing coverage will be available in sufficient amounts to cover one or more large claims, or that our insurers will not disclaim coverage as to any claims. A successful assertion of one or more large claims against our Company that exceeds our available insurance coverage or that leads to adverse changes in our insurance policies, including premium increases or the imposition of a large deductible or coinsurance requirement, could adversely affect our financial condition and results of operations. Our Company has however, not availed key man insurance policies. Further, our Company has not availed of business interruption / loss of profits insurance cover. For further details for our Insurance Coverage, Please refer Section “Our Business” on page 85 of this Prospectus.

31. *Our Company has recently applied for registration of certain trademarks in its name. Until such registrations are granted, we may not be able to prevent unauthorized use of such trademarks by third parties which may lead to the dilution of our goodwill.*

We have filed applications for registration of 8 (eight) trademarks under class 6, 9 and 35 under the Trade Marks Act, 1999, which are currently pending approval from the Registrar of Trademarks. The registration of any trademark is a time consuming process and there can be no assurance that any such registration will be granted. Our applications for the registration of these trademarks may be opposed by third parties, and we may have to incur significant cost in relation to these oppositions. In the event we are not able to obtain registrations or if any injunctive or other adverse order is issued against us in respect of any of our trademarks for which we have applied for registration, we may not be able to avail the legal protection and legal remedies (in case of infringement) or prohibit unauthorized use of such trademarks by third parties by means of statutory protection, available as a proprietor of registered trademarks, which may materially and adversely affect our goodwill and business. We cannot provide any assurance that third parties will not infringe upon our trademark, trade names logos or brand names, and thereby cause damage to our business prospects, reputation or goodwill

In addition to the aforementioned trademarks, our Company also uses certain unregistered trademarks for which no applications for registration have been filed by our Company. It may be difficult for our Company to protect its interests in such unregistered trademarks against infringement by third parties, which may dilute our goodwill and burden us with additional litigation costs. The artistic work in various logo used by our Company have not been registered under the Copyright Act, 1957.

Further, our Company has also acquired certain trademarks which are still registered in the name of third parties. It may be difficult for our Company to protect its interests in such trademarks against infringement by other parties, which may dilute our goodwill and burden us with additional litigation costs.

For further details refer section “Government and Other Approvals” on page 176 of this Prospectus.

32. *Our Company has not registered its corporate name and logo which may result in substantial loss to our Company if any third party uses such name and logo.*

Our Company had applied for the registration of the trademark of its logo*  by an application dated August 14, 2013 under class 9 and under the Trade Marks Act, 1999. Our corporate name and logo has not been registered as a result of the same the use of the words “Tentiwal Wire Products” in the corporate and trading names by any third parties may lead consumers to confuse them with our Company and if they experience any negative publicity, it could have an adverse effect on our business, results of operations and financial condition. This confusion might also lead to our Company losing business to such competitors and might adversely affect our goodwill. Maintaining the reputation of our brands, corporate name, logo and the goodwill associated with these trademarks is critical to our success. Substantial erosion in the value of our brand names could have a material adverse effect on our business, financial condition, results of operations and prospects.

33. We are heavily dependent upon the growth prospects of the industries which consume our products. Any slowdown in the rate of growth of these industries would seriously impact our own growth prospects and may result in decline in profits.

Our Company’s business involves supply of winding wires for submersible pumps, super enameled copper wires, aluminium extrusion products which form the constituent of the infrastructure industry and similar Industries. The demand for these products will ultimately be from industries, which in turn depend on global and domestic economic conditions. Due to the lack of demand, the slowdown in these industries may have an adverse impact on our business.

34. We may not be able to sustain effective implementation of our business and growth strategies.

The success of our business will depend greatly on our ability to effectively implement our business and growth strategies. We may not be able to execute our strategies in future. Further, our growth strategies could place significant demand on our management team and other resources and would require us to continuously develop and improve our operational, financial and other controls, none of which can be assured. Any failure on our part to scale up our infrastructure and management could cause disruptions to our business and could be detrimental to our long-term business outlook.

35. Fluctuations in the price, availability and quality of raw materials could delay and increase costs.

We rely on third-party suppliers for Copper and Aluminum and other raw materials. The prices and supply of the raw materials depend on factors not under our control, including general economic conditions, competition, production levels, and import duties. Adverse fluctuations in the price, availability and quality of the raw materials used by us in our manufactured products could have a material adverse effect on our cost of goods sold or our ability to meet our customers’ demands. The price and availability of such raw materials may fluctuate significantly, depending on many factors, including increase in transportation costs, inability of foundries to meet our demands within the requisite time, increase in prices of the metals used by us and increase in charges of the foundries/machining workshops. Any material shortage or interruption in the supply or decrease in the quality of these raw materials due to natural causes or other factors could result in increased costs of goods sold that we may not be able to pass on to our customers, which in turn would have a material adverse effect on our margins, results of operations and cash flows. Moreover, we fix the price of the products sold by us to our customers at the time they place the order with us. In most cases, we do not have the right to revise the rates once we have accepted the customer’s order. Thus, the risk of increase in the price of the raw materials from the date the order is placed until we procure the raw materials is borne entirely by us. This sales model may reduce our operating margins. A steady increase in the prices of our raw materials may have a material adverse effect on our operating results, financial condition and cash flows.

36. We have high working capital requirements and we may not be able to raise the required capital for future orders.

Our business requires a large amount of working capital, used significantly to finance the purchase of raw materials and other work on projects before payments are received from customers. Our working capital requirements may increase if, under certain orders, payment terms do not include advance payments or such orders have payment schedules that shift payments toward the end of the order or otherwise increase our working capital burdens. We typically invoice our customers only upon dispatch of the orders. In addition, our working capital requirements have increased in recent years because we have undertaken a growing number of orders within a similar timeframe and due to the growth of the Company’s business generally. All of these factors may result, or have resulted, in increases in our working capital needs.

Our ability to arrange financing and the costs of capital of such financing are dependent on numerous factors, including general economic and capital market conditions, credit availability from banks, investor confidence, the continued success of our current projects and other laws that are conducive to our raising capital in this manner. Our attempts to complete future financings may not be successful or on favourable terms and failure to obtain financing on terms favourable to us could have a material adverse effect on our business and results of operations and cash flows.

37. *Delays or defaults in customer payments could result in a reduction of our profits and cash flows.*

We often commit resources to orders prior to receiving advances or other payments from customers in amounts sufficient to cover expenditures on orders as they are incurred. We may be subject to working capital shortages due to delays in customer payments.

If the customer defaults in their payments on an order, or cancel their orders for which we have devoted significant resources or incurred expenditure, it could have a material adverse effect on our business, financial condition, results of operations and cash flows and could cause the price of our Equity Shares to decline.

Moreover, our products are made as per specifications provided by our customers. Hence, any last minute cancellations would also run the risk of not being able to sell those products to another customer. These events could have a material adverse effect on our revenues, results of operations and cash flows.

38. *The potential liability for any failure to comply with environment laws or for any currently unknown environment problems could be significant.*

Under various applicable environmental laws and regulations, the owner of the property may be liable for failing to maintain air and water pollution within prescribed levels, or for failing to comply with various environmental regulations while constructing and operating our manufacturing plants. We are not aware of any environmental liability that could have a material adverse effect on our business, assets, financial condition or results of operations, nor have we been notified by any governmental authority or any third party, and we are not otherwise aware, of any material noncompliance or other claim relating to hazardous or toxic substances in connection with any of our present or former manufacturing plants. We cannot, however, assure you that we will remain in compliance with all environmental laws and regulations, or that the requirements of such laws and regulations will not change.

39. *We rely on information technology systems and any failure in our systems could adversely impact our business.*

We rely extensively on our information technology systems for our product designing and to provide us connectivity across our business functions through our software, hardware and connectivity systems. Any delay in implementation or any disruptions in the functioning could disrupt our ability to design our products, track, record and analyze the merchandise that we sell and cause disruptions of operations, including, among others, an inability to process consignment of goods, process financial information, deliver products or engage in similar normal business activities.

40. *There is no monitoring agency appointed by Our Company and the deployment of funds are at the discretion of our Management and our Board of Directors, though it shall be monitored by the Audit Committee.*

As per SEBI (ICDR) Regulations, 2009 appointment of monitoring agency is required only for Issue size above ₹ 50,000 Lacs. Hence, we have not appointed a monitoring agency to monitor the utilization of Issue proceeds. However, the audit committee of our Board will monitor the utilization of Issue proceeds. Further, our Company shall inform about material deviations in the utilization of Issue proceeds, if any to the BSE Limited and shall also simultaneously make the material deviations / adverse comments of the audit committee public.

41. *The new Companies Act, 2013 is in the process of being implemented and any developments in the near future may be material with respect to the disclosures to be made in this Prospectus as well as other rules and formalities for completing the Issue.*

The Companies Act, 2013 has been published on August 29, 2013 and Section 1 of the said Act was notified on August 30, 2013 while 98 more sections were notified as on September 12, 2013. Though we have incorporated the relevant details pertaining to the new Companies Act, 2013 (to the extent notified) in this Prospectus, any further notifications by the MCA after our filing of this Prospectus may be material with respect to the disclosures to be made in this Prospectus as well as other rules and formalities for completing the Issue. The Companies Act, 2013 is expected to replace the existing Companies Act, 1956. The Companies Act, 2013 provides for, among other things, changes to the regulatory framework governing the issue of capital by companies, corporate governance, audit procedures, corporate social responsibility, the requirements for independent directors, director's liability, class action suits, and the inclusion of women directors on the boards of companies. The Companies Act, 2013 is expected to be complemented by a set of rules that shall set out the procedure for compliance with the substantive provisions of the Companies Act, 2013. In the absence of such rules, it is difficult to predict with any degree of certainty the impact, adverse or otherwise, of the Companies Act, 2013 on the Issue, and on the business, prospects and results of operations of the Company

RISK RELATING TO EQUITY SHARES

42. Our Promoters, together with our Promoter Group, will continue to retain majority shareholding in our Company after the proposed Initial Public Issue, which will allow them to exercise significant control over us. We cannot assure you that our Promoters and Promoter Group members will always act in the best interests of the Company.

After the completion of our Initial Public Issue, our Promoters, along with our Promoter Group members, will hold, approximately 59.97% of our post issue paid up Equity Capital of our Company. As a result, our Promoters will continue to exercise significant control over us, including being able to control the composition of our Board and determine matters requiring shareholder approval or approval of our Board. Our Promoters may take or block actions with respect to our business, which may conflict with our interests or the interests of our minority shareholder. By exercising their control, our Promoters could delay, defer or cause a change of our control or a change in our capital structure, delay, defer or cause a merger, consolidation, takeover or other business combination involving us, discourage or encourage a potential acquirer from making a tender offer or otherwise attempting to obtain control of our Company. We cannot assure you that our Promoters and Promoter Group members will always act in our Company's or your best interests. For further details, please refer to the chapters titled "Capital Structure" and "Our Promoter, Promoter Group and Group Companies / Entities" are beginning on page 46 and 129 respectively, of this Prospectus.

43. Our Company has not paid dividends in the past. There is no guarantee that we will be able to pay dividends in the future.

Our Company has not paid any dividend (including any interim dividend) on its shares during the preceding 5 financial years and the three months period ending June 30, 2013. Further, our ability to pay dividends in the future will depend upon a variety of factors, including our future earnings, financial condition, cash flows, working capital requirements and restrictive covenants in our financing arrangements, if any. As a result, we cannot assure you that we will make dividends of any particular amount, with any particular frequency or at all.

44. Any future issuance of Equity Shares may dilute your shareholdings, and sales of the Equity Shares by our major shareholders may adversely affect the trading price of our Equity Shares.

Any future equity issuances by our Company may lead to the dilution of investors' shareholdings in our Company. In addition, any sale of substantial Equity Shares in the public market after the completion of this Issue, including by our major shareholders, or the perception that such sales could occur, could adversely affect the market price of the Equity Shares and could significantly impair our future ability to raise capital through offerings of the Equity Shares. We cannot predict what effect, if any, market sales of the Equity Shares held by the major shareholders of our Company or the availability of these Equity Shares for future sale will have on the market price of our Equity Shares.

45. You may be subject to Indian taxes arising out of capital gains on sale of Equity Shares.

Under current Indian tax laws and regulations, capital gains arising from the sale of Equity Shares in an Indian Company are generally taxable in India. Any gain realized on the sale of listed Equity Shares on a stock exchange held for more than 12 months will not be subject to capital gains tax in India if Securities Transaction Tax ("STT") has been paid on the transaction. STT will be levied on and collected by a domestic stock exchange on which the Equity Shares are sold. Any gain realised on the sale of Equity Shares held for more than 12 months to an Indian resident, which are sold other than on a recognized stock exchange and on which no STT has been paid, will be subject to long term capital gains tax in India. Further, any gain realized on the sale of listed Equity Shares held for a period of 12 months or less will be subject to short term capital gains tax in India. For more details, please refer to "Statement of Tax Benefits" on page 67 of this Prospectus.

46. We cannot assure you that our Equity Shares will be listed on the SME Platform of BSE in a timely manner or at all, which may restrict your ability to dispose of the Equity Shares.

In terms of Chapter XB of the SEBI (ICDR) Regulations, 2009, as amended from time to time, we are not required to obtain any in-principle approval for listing of our Equity Shares issued. We have only applied to BSE Limited to use its name as the Stock Exchange in this Prospectus for listing our Equity Shares on the SME Platform of BSE Limited. Permission for listing of the Equity Shares will be granted only after the Equity Shares offered in this Issue have been allotted. Approval from BSE Limited will require all relevant documents authorizing the issuing of the Equity Shares to be submitted to it. There could be a failure or delay in listing the Equity Shares on the SME Platform of BSE. Further, certain procedural and regulatory requirements of SEBI and the Stock Exchanges are required to be completed before the Equity Shares are listed and trading commences. Trading in the Equity Shares is expected to commence within 12

Working Days from the Issue Closing Date. However, we cannot assure you that the trading in the Equity Shares will commence in a timely manner or at all. Any failure or delay in obtaining the approvals would restrict your ability to dispose off your Equity Shares.

47. The price of our Equity Shares may be volatile, or an active trading market for our Equity Shares may not develop.

Prior to this Issue, there has been no public market for our Equity Shares. Hem Securities Limited is acting as Market Maker for the Equity Shares of our Company. However, the trading price of our Equity Shares may fluctuate after this Issue due to a variety of factors, including our results of operations and the performance of our business, competitive conditions, general economic, political and social factors, the performance of the Indian and global economy and significant developments in India's fiscal regime, volatility in the Indian and global securities market, performance of our competitors, the Indian Capital Markets, changes in the estimates of our performance or recommendations by financial analysts and announcements by us or others regarding contracts, acquisitions, strategic partnerships, joint ventures, or capital commitments. In addition, if the stock markets experience a loss of investor confidence, the trading price of our Equity Shares could decline for reasons unrelated to our business, financial condition or operating results. The trading price of our Equity Shares might also decline in reaction to events that affect other companies in our industry even if these events do not directly affect us. Each of these factors, among others, could materially affect the price of our Equity Shares. There can be no assurance that an active trading market for our Equity Shares will develop or be sustained after this Issue, or that the price at which our Equity Shares are initially offered will correspond to the prices at which they will trade in the market subsequent to this Issue. For further details of the obligations and limitations of Market Makers, please refer to the section titled "General Information – Details of the Market Making Arrangement for this Issue" on page 43 of this Prospectus.

48. There may be restrictions on daily movements in the price of our Equity Shares, which can adversely affect shareholder's ability to sell, or the price at which it can sell, Equity Shares at a particular point of time.

Subsequent to listing, our Company may be subject to a daily circuit breaker imposed on listed companies by the BSE, which does not allow transactions having crossed certain volatility limit in the price of its Equity Shares. This circuit breaker operates independently of the index-based market-wide circuit breakers generally imposed by SEBI on Indian stock exchanges. The percentage limit on our Company's circuit breaker is set by the BSE based on certain factors such as the historical volatility in the price and trading volume of the Equity Shares. The BSE is not required to inform us of the percentage limit of the circuit breaker from time to time, and may change it without our knowledge. This circuit breaker, if imposed, would effectively limit the upward and downward movements in the price of the Equity Shares. As a result of this circuit breaker, we cannot assure that the shareholders will be able to sell the Equity Shares at desired prices.

EXTERNAL RISK FACTORS

49. We sell our products in a highly competitive and fragmented industry. An inability to compete effectively may lead to lower market share or reduced operating margins.

The wires and aluminium manufacturing industry is highly competitive and fragmented, both in India and Internationally. As a result, to remain competitive in the market, we must continuously strive to reduce our production and distribution costs and improve our operating efficiencies. If we fail to do so, our competitors may be able to sell their products at prices lower than ours, which may adversely affect on our market share, results of operations and cash flows.

Certain of our competitors may be larger than us and may benefit from greater economies of scale and operating efficiencies. There is no assurance that we can continue to effectively compete with such manufacturers in the future, and failure to compete effectively may have an adverse effect on our business, financial condition, results of operations and cash flows. Moreover, the competitive nature of the industry may result in lower prices for our products and decreased gross profit margins, either of which may materially adversely affect our sales, profitability and cash flows.

50. A slowdown in economic growth in India or in the States in India, in which we operate, could cause our business to suffer.

Our performance and the quality and growth of our assets are dependent on the health of the overall Indian economy and the economy of the States in India in which we operate. India's economy could be adversely affected by a general rise in interest rates, weather conditions adversely affecting agriculture, commodity and energy prices or various other factors. Any slowdown in the Indian economy or in the States in India in which we operate or future volatility in global

commodity prices could adversely affect the policy of the various Governments towards infrastructure, which may in turn adversely affect our financial performance.

51. Significant differences exist between Indian GAAP and other accounting principles, such as IFRS, which may be material to investors' assessment of our financial condition and results of operations. Our failure to successfully convert to IND AS within the prescribed time framework could have an adverse effect on our stock price.

Our financial statements, including the financial statements provided in this Prospectus, are prepared in accordance with Indian GAAP. We have not attempted to quantify the impact of IFRS or U.S. GAAP on the financial data included in this Prospectus, nor do we provide a reconciliation of our financial statements to those of U.S. GAAP or IFRS. U.S. GAAP and IFRS differ in significant respects from Indian GAAP. Accordingly, the degree to which the Indian GAAP financial statements included in this Prospectus will provide meaningful information is entirely dependent on the reader's level of familiarity with Indian accounting practices. Any reliance by persons not familiar with Indian accounting practices on the financial disclosures presented in this Prospectus should accordingly be limited.

52. The recurrence of systemic events such as the recent global economic meltdown, instability of economic policies and the political situation in India or globally may adversely affect our performance.

Economic conditions outside India, may adversely impact the growth of the Indian economy, and Government policy may change in response to such conditions. Unstable internal and international political environment may impact the economic performance of the aluminium industry, including our Company, in the short and long term. Our business, and the market price and liquidity of our Equity Shares, may be affected by reactionary changes in interest rates, changes in government policy, taxation, social and civil unrest and other political, economic or other developments in or affecting India on account of any changes in the global economic changes.

The Indian financial market and the Indian economy are influenced by economic and market conditions in other countries. Financial turmoil in Asia, the United States, Europe and elsewhere in the world in recent years has affected the Indian economy. Although economic conditions are different in each country, investor's reactions to developments in one country can have adverse effects on the securities of companies in other countries, including India. The Indian financial markets experienced the contagion effect of the volatility and turmoil in the global financial markets, which was evident from the sharp decline in the benchmark indices of SENSEX and NIFTY from their peak levels in early 2008 to the first quarter of 2009. As a consequence of the severe tightening of credit associated with that financial turmoil, many economies experienced periods of severe recession accompanied by a significant deterioration of consumer confidence and demand. Additionally, due to the conditions in the global and domestic financial markets, we cannot be certain that we would be able to raise capital, if needed or to the extent required, or that we will be able to undertake our business without any disruptions and we may be unable to implement our growth strategy. Any recurrence of such events may have an adverse effect on our business, financial condition and results of operations as well as the price of our Equity Shares.

53. The occurrence of natural disasters may adversely affect our business, financial condition and results of operations.

India has experienced natural calamities such as earthquakes, a tsunami, floods and drought in the past few years. The extent and severity of these natural disasters determine their impact on the Indian economy. This may adversely affect our business operations and financial position of our Company.

54. Political instability or changes in the Government may delay the liberalisation of the Indian economy and adversely affect economic conditions in India generally, which may impact our business, financial condition and results of operations.

The role of the central and state governments in the Indian economy has remained significant over the years. Since 1991, the Government of India has pursued policies of economic liberalization, including significantly relaxing restrictions on the private sector. There can be no assurance that these liberalization policies will continue in the future. The rate of economic liberalization could change, and specific laws and policies affecting foreign investment, currency exchange rates and other matters affecting investment in Indian companies could change as well. A significant change in India's economic liberalization and deregulation policies could disrupt business and economic conditions in India, thereby affect our business.

55. Foreign investors are subject to foreign investment restrictions under Indian law that limits our ability to attract foreign investors, which may adversely impact the market price of the Equity Shares.

Under the foreign exchange regulations currently in force in India, transfers of shares between nonresidents and residents are freely permitted (subject to certain exceptions) if they comply with the pricing guidelines and reporting requirements specified by the RBI. If the transfer of shares, which are sought to be transferred, is not in compliance with such pricing guidelines or reporting requirements or fall under any of the exceptions referred to above, then the prior approval of the RBI will be required. Additionally, shareholders who seek to convert the Rupee proceeds from a sale of shares in India into foreign currency and repatriate that foreign currency from India will require a no objection/ tax clearance certificate from the income tax authority. There can be no assurance that any approval required from the RBI or any other government agency can be obtained on any particular terms or at all.

56. The Issue Price of our Equity Shares may not be indicative of the market price of our Equity Shares after this Issue.

The price is based on numerous factors and may not be indicative of the market price for our Equity Shares after the Issue. The market price of our Equity Shares could be subject to significant fluctuations after the Issue, and may decline below the Issue Price. There can be no assurance that you will be able to resell your Shares at or above the Issue Price. Among the factors that could affect our Share price are: quarterly variations in the rate of growth of our financial indicators, such as earnings per share, net profit and income; changes in income or earnings estimates or publication of research reports by analysts; speculation in the press or investment community; general market conditions; and domestic and international economic, legal and regulatory factors unrelated to our performance.

57. There are restrictions on daily movements in the price of the Equity Shares, which may adversely affect a shareholder's ability to sell, or the price at which it can sell, Equity Shares at a particular point in time.

Subsequent to listing, our Company may be subject to a daily circuit breaker imposed on listed companies by all stock exchanges in India which does not allow transactions beyond certain volatility in the price of the Equity Shares. This circuit breaker operates independently of the index-based market-wide circuit breakers generally imposed by SEBI on Indian stock exchanges. The percentage limit on our Company's circuit breaker is set by the stock exchanges based on certain factors such as the historical volatility in the price and trading volume of the Equity Shares. The stock exchanges are not required to inform our Company of the percentage limit of the circuit breaker from time to time, and may change it without its knowledge. This circuit breaker, if imposed, would effectively limit the upward and downward movements in the price of the Equity Shares. As a result of this circuit breaker, there can be no assurance regarding the ability of shareholders to sell the Equity Shares or the price at which shareholders may be able to sell their Equity Shares.

SUMMARY OF OUR INDUSTRY

This is only a summary and does not contain all the information that you should consider before investing in our Equity Shares. Indian Economic Review

The Indian economy continued to remain sluggish in Q4 of 2012-13, though it still maintained a pace faster than most of the Emerging & Developing Economies. The growth in the full year, 2012-13, slipped to 5.0 per cent -the lowest since 2002-03. Factors like Domestic policy uncertainties, governance concerns, the impact of earlier monetary tightening, slack external demand conditions and a weak monsoon, weighed down on the growth process during the year.

Aggregate demand of the Indian economy during Q4 of 2012-13 remained slack with little improvement in investment activity and deceleration in consumption demand. Private consumption in real terms has decelerated due to persistent high inflation, while investment is hobbled by structural constraints. Corporate results indicate weak sales growth with corporate investment intentions remaining listless.

The Index of Industrial Production (IIP) nearly stagnated during 2012-13, registering a dismal 1.1 per cent growth on a low base of 2.9 per cent in the preceding year. During April- May 2013, the IIP registered a marginal growth of 0.1 per cent as compared with 0.6 per cent during April-May 2012 (Table I.3). The pervasiveness of the slowdown is reflected across a wide range of industrial classifications. The contraction of the mining sector and capital goods continues to affect the overall performance of the industrial sector. Excluding capital goods and mining, the growth of the IIP during April-May 2013 was 1.0 per cent. Manufacturing sector growth remained almost stagnant during April-May 2013. Important industries such as machinery and equipment, basic metals, fabricated metal products, computing machinery, food products and motor vehicles registered contraction in output during the period.

Persistent power shortages affected the capacity utilisation of the manufacturing sector. As a result, backlogs of work accumulated in the sector. The growth of power generation has remained at 5.3 per cent during April-May 2013. However, going forward, power generation is expected to accelerate during the year with a normal monsoon and capacity additions, although the supply of coal may remain a constraint. As per the use-based classification of industries, with the exception of intermediate goods and consumer non-durables, the growth of all other categories declined during April-May 2013 (Table I.3). The output of consumer durable goods has declined since December 2012, mainly due to a fall in the production of passenger cars and motor-cycles. The contraction of the capital goods sector continued in 2013-14. However, fast-tracking of investment projects is expected to generate higher demand for machinery and construction-related items and is, thus, likely to augment production in the capital goods sector.

Core industries continued to be adversely affected by supply bottlenecks and infrastructure constraints, thereby growing only at 2.4 per cent during April-May 2013-14, which is much lower than in the corresponding period of the previous year. While the output of coal, natural gas, fertilisers and crude oil contracted during the period, there was deceleration in the production of electricity, petroleum refinery products and cement.

The services sector recorded the lowest growth in 11 years at 6.8 per cent during 2012- 13. Activity in the ‘financing, insurance, real estate & business services’ and ‘trade, hotels, restaurant, transport & communication’ sectors decelerated. The decline in lead indicators, such as automobile sales, cargo handled at major ports and civil aviation sector, during April-June 2013 signal a further slowdown in the services sector (Table I.4). The Reserve Bank’s services sector

composite indicator, which is based on growth in indicators of construction, trade and transport and finance, showed an upturn in Q4 of 2012-13, but indicated a slight fall during April-May 2013

India's GDP growth is expected to improve in 2013-14, with recovery expected to take shape as the year progresses. The pace of recovery is, however, likely to be slow in view of the structural constraints. Recent policy measures by the government in various segments, especially in the infrastructure sector, are likely to help improve production activity. Timely, normal and well-spread rainfall will have a positive impact on agriculture production, which, in turn, may improve rural demand for industrial goods and services. The improvement in water storage levels in reservoirs due to heavy rainfall would enable the hydro power sector to enhance capacity utilisation. On the global front, the pick-up in growth in the US and Japan is likely to have a positive impact on global trade.

Global & Indian Copper Industry

Refined copper consumption is estimated at 20.5 million metric tons for 2012, in the first quarter of 2013, world usage is estimated to have declined by around 5.3% compared with that in the same period of 2012.

China, the leading global consumer of copper, accounts for about 40% of world demand for copper. After adjusting for possible disruptions, world mine production for 2013 and 2014 is anticipated to grow by around 5.5% each year to 17.6 Million tonnes (Mt) and 18.5 Mt respectively.

India has become a net exporter of copper after being a net importer during the last decade, even as the country is not a major producer of copper ore, but produces the refined forms of copper. In 2012, India's production of refined copper is 689,312 MT, which is around 4% of the total world production. Growing trend in the building construction and automobile sector is expected to keep demand of copper high. Copper prices in India are fixed on the basis of the rates that rule in the international spot market, and Indian Rupee and US Dollar exchange rates.

Global & India Aluminium Industry

The global aluminum industry is forecast to reach an estimated US\$160billion in 2017 with a CAGR of 5.3% over the next four years (2013-2017).

A combination of factors such as growth in related complementary industries, additional governmental regulations, and cyclical fluctuations in input prices, general economic conditions, and expansion in end-user markets influence the industry dynamics significantly. China continues to dominate the global aluminium market by significantly increasing its share of global aluminium consumption.

The Indian Aluminium Extrusion industry is characterized by high entry barriers, due to the capital-intensive nature of the business. The Indian aluminum extrusions market is likely to see a double digit growth over the next few years due to robust demand from all its consumer segments, particularly Building & construction, power and electrical and automobile sectors.

INDIAN ECONOMY REVIEW

The Indian economy continued to remain sluggish in Q4 of 2012-13, though it still maintained a pace faster than most of the Emerging & Developing Economies. The growth in the full year, 2012-13, slipped to 5.0 per cent –the lowest since 2002-03. Factors like Domestic policy uncertainties, governance concerns, the impact of earlier monetary tightening, slack external demand conditions and a weak monsoon, weighed down on the growth process during the year.

Aggregate demand of the Indian economy during Q4 of 2012-13 remained slack with little improvement in investment activity and deceleration in consumption demand. Private consumption in real terms has decelerated due to persistent high inflation, while investment is hobbled by structural constraints. Corporate results indicate weak sales growth with corporate investment intentions remaining listless.

The Index of Industrial Production (IIP) nearly stagnated during 2012-13, registering a dismal 1.1 per cent growth on a low base of 2.9 per cent in the preceding year. During April- May 2013, the IIP registered a marginal growth of 0.1 per cent as compared with 0.6 per cent during April-May 2012 (Table I.3). The pervasiveness of the slowdown is reflected across a wide range of industrial classifications. The contraction of the mining sector and capital goods continues to affect the overall performance of the industrial sector. Excluding capital goods and mining, the growth of the IIP during April-May 2013 was 1.0 per cent. Manufacturing sector growth remained almost stagnant during April-May 2013. Important

industries such as machinery and equipment, basic metals, fabricated metal products, computing machinery, food products and motor vehicles registered contraction in output during the period.

Persistent power shortages affected the capacity utilisation of the manufacturing sector. As a result, backlogs of work accumulated in the sector. The growth of power generation has remained at 5.3 per cent during April-May 2013. However, going forward, power generation is expected to accelerate during the year with a normal monsoon and capacity additions, although the supply of coal may remain a constraint. As per the use-based classification of industries, with the exception of intermediate goods and consumer non-durables, the growth of all other categories declined during April-May 2013 (Table I.3). The output of consumer durable goods has declined since December 2012, mainly due to a fall in the production of passenger cars and motor-cycles. The contraction of the capital goods sector continued in 2013-14. However, fast-tracking of investment projects is expected to generate higher demand for machinery and construction-related items and is, thus, likely to augment production in the capital goods sector.

Core industries continued to be adversely affected by supply bottlenecks and infrastructure constraints, thereby growing only at 2.4 per cent during April-May 2013-14, which is much lower than in the corresponding period of the previous year. While the output of coal, natural gas, fertilisers and crude oil contracted during the period, there was deceleration in the production of electricity, petroleum refinery products and cement. The recent initiatives by the government are expected to somewhat ease supply bottlenecks in the core industrial sector. In particular, the Union Cabinet's approval for setting up an independent regulatory authority for the coal sector is likely to benefit coal dependent industries such as power, steel and cement. The envisaged changes in the gas pricing policy will incentivise investment in the Indian upstream sector and help boost production. Also, the target of rolling out `1 trillion worth of PPP projects in the infrastructure sector in the next six months will provide a boost to industry

The services sector recorded the lowest growth in 11 years at 6.8 per cent during 2012-13. Activity in the ‘financing, insurance, real estate & business services’ and ‘trade, hotels, restaurant, transport & communication’ sectors decelerated. The decline in lead indicators, such as automobile sales, cargo handled at major ports and civil aviation sector, during April-June 2013 signal a further slowdown in the services sector (Table I.4). The Reserve Bank’s services sector composite indicator, which is based on growth in indicators of construction, trade and transport and finance, showed an upturn in Q4 of 2012-13, but indicated a slight fall during April-May 2013

India’s GDP growth is expected to improve in 2013-14, with recovery expected to take shape as the year progresses. The pace of recovery is, however, likely to be slow in view of the structural constraints. Recent policy measures by the government in various segments, especially in the infrastructure sector, are likely to help improve production activity. Timely, normal and well-spread rainfall will have a positive impact on agriculture production, which, in turn, may improve rural demand for industrial goods and services. The improvement in water storage levels in reservoirs due to heavy rainfall would enable the hydro power sector to enhance capacity utilisation. On the global front, the pick-up in growth in the US and Japan is likely to have a positive impact on global trade. The recent rupee depreciation augurs well for India’s exports. However, risks to growth in 2013-14 have increased significantly, with prospects that the global interest rate cycle could turnaround and diminish capital inflows to India.

GLOBAL ALUMINIUM INDUSTRY

Increasing application, growing environmental concerns, and the move toward greater use of recyclable materials are driving growth in the worldwide aluminum market. The global aluminum industry is forecast to reach an estimated US\$160billion in 2017 with a CAGR of 5.3% over the next four years (2013-2017).

The aluminum industry is highly consolidated. The Asia Pacific (APAC) region dominates the industry. A combination of factors such as growth in related complementary industries, additional governmental regulations, and cyclical fluctuations in input prices, general economic conditions, and expansion in end-user markets influence the industry dynamics significantly. China continues to dominate the global aluminium market by significantly increasing its share of global aluminium consumption.

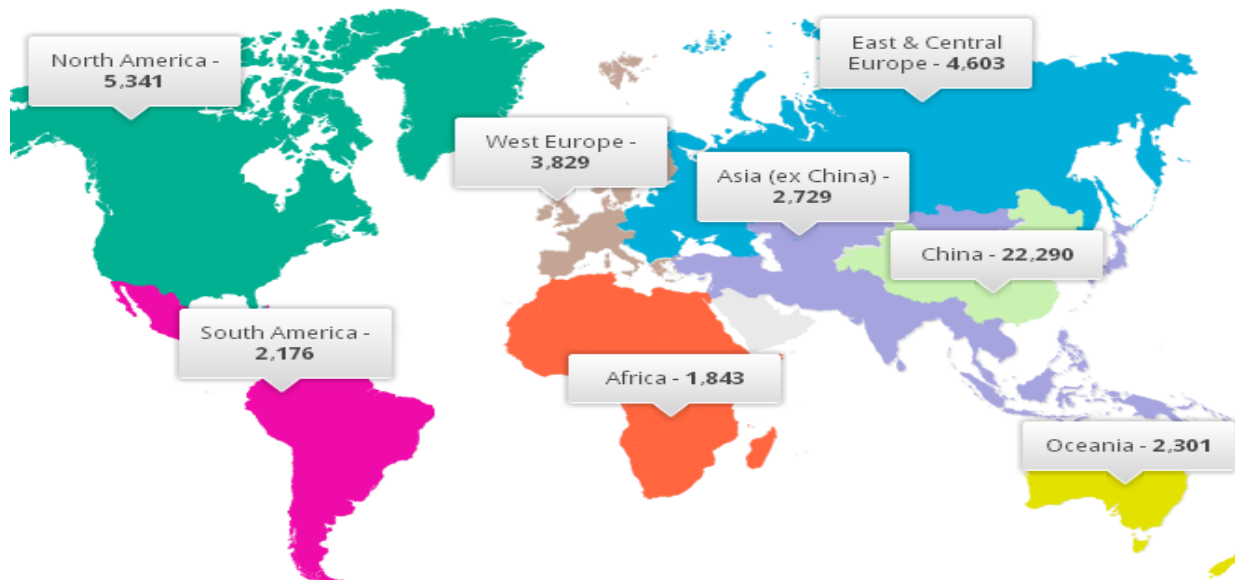

Looking over the supply-side, the market is shifting towards the Middle East due to the availability of cheap energy in the region, while aluminium producers in Western Europe and Northern America are continuously removing their production capacities to reduce losses.

Aluminium industry grew at a good pace during 2006-2011 due to growth in end-user markets such as transportation and packaging, which constitute approximately 45% of the industry consumption. Additionally, the boom in the construction and infrastructure markets is also driving the aluminum market.

INDIAN ALUMINUM INDUSTRY

The Indian Aluminum Extrusion industry is characterized by high entry barriers, due to the capital-intensive nature of the business. The domestic primary aluminum industry is around 4-5 per cent of the global aluminum industry. The Indian aluminum extrusions market has an installed capacity of about 5,20,000 Metric Tonnes (MT) per annum which is likely to see a double digit growth over the next few years due to robust demand from all its consumer segments, particularly Building & construction, power and electrical and automobile sectors.

The Indian extrusion industry offers unlimited possibilities in terms of shapes and sizes for use across various industrial sectors, which has opened up a plethora of new applications.

GLOBAL COPPER INDUSTRY

Copper ranks third in the world consumption of metals, after iron and aluminum. Refined copper consumption is estimated at 20.5 million metric tons for 2012, compared with 16.7 million tons achieved in 2005.

According to the International Copper Study Group (ICSG), for the first ten months of 2012, world apparent usage of copper grew by 4.2% compared with that in the same period of 2011, principally owing to the strong growth in Chinese consumption. China, the leading global consumer of copper, accounts for about 40% of world demand for copper.

World refined production increased by 1.7% during the first ten months of 2012 compared with the same 2011 period. The main contributors were China (+9%), Japan (+15%) and the Democratic Republic of Congo (DRC) (+29%). In the first quarter of 2013, world usage is estimated to have declined by around 5.3% compared with that in the same period of 2012

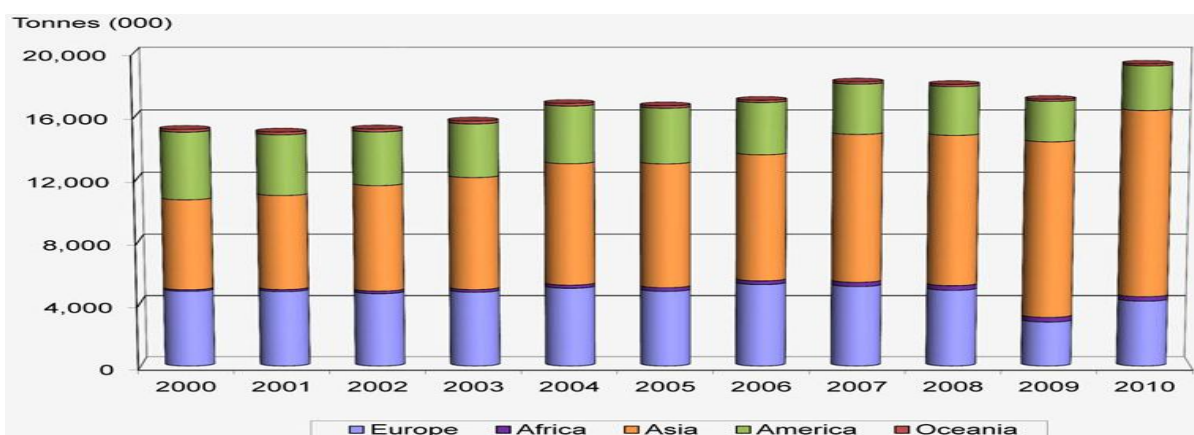

According to preliminary ICSG data, the world refined copper balance in 2012 showed a production shortfall relative to demand of around 400,000 metric tonnes (t) mainly due to constrained growth in refined production and significant growth in China's apparent demand.

World production of refined copper is expected to exceed demand for refined copper by about 415,000 t, as demand will lag behind the growth in production. After adjusting for possible disruptions, world mine production for 2013 and 2014 is anticipated to grow by around 5.5% each year to 17.6 Million tonnes (Mt) and 18.5 Mt respectively.

INDIAN COPPER INDUSTRY

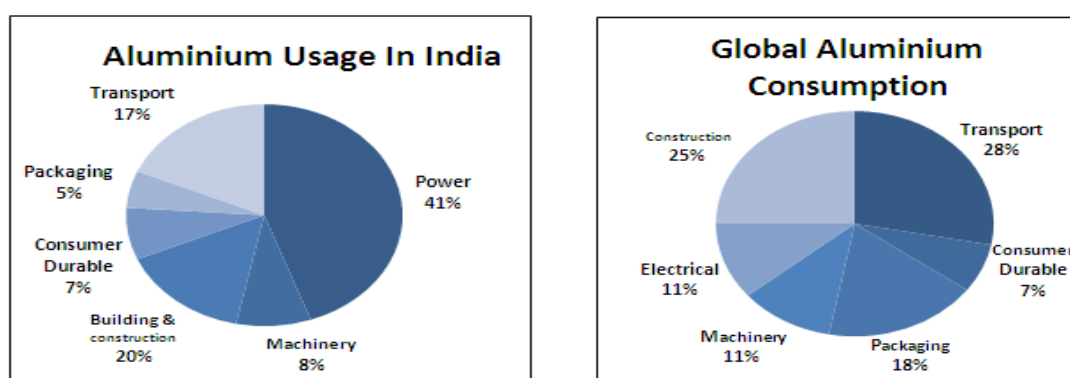

Copper, also known as Cu, is one of the oldest elements. It is reddish with a bright metallic luster colored solid. Copper occurs naturally in the Earth's crust in a variety of forms. The Indian copper industry grew by nearly 50% in 2011. India has become a net exporter of copper after being a net importer during the last decade, even as the country is not a major producer of copper ore, but produces the refined forms of copper.

In 2012, India's production of refined copper is 689,312 MT, which is around 4% of the total world production. Mines are generally located in the north western region of the country and go on to exist as far as the central India. During the last few years, India's switch from net importer to exporter is due to a rise in production by three companies: Sterlite Industries, Hindalco, and Hindustan Copper. The state-owned Hindustan Copper is a vertically integrated producer, whereas Hindalco and Sterlite Industries are mainly custom smelters. Hindalco and Sterlite industries account for more than 80% of India's total copper production. Growing trend in the building construction and automobile sector is expected to keep demand of copper high.

Copper prices in India are fixed on the basis of the rates that rule in the international spot market, and Indian Rupee and US Dollar exchange rates.

DEMAND DRIVERS FOR ALUMINIUM

Building and Construction Industry – In building Industry, the current demand for extrusions is largely for simple doors and windows sections. The usage of building system and unitized system are yet to gain large scale acceptance in this market. Building Construction industry consumes about 20% of the total aluminum extrusion produce.

Power Industry – With a large population and high solar insolation is an ideal location for solar energy production. In 2009, India unveiled a plan to produce 20GW of solar power by 2020 current production of solar power is less than 1 GW. Aluminium is the metal of choice for solar power being manufactured; about 40-50 tonnes of extrusions are used for mounting system per MW of installation. This sector also maintains large concentrations of aluminum extrusions at power generation, telecommunication, electrical and electronic products, and in transmission and distribution lines.

Automotive Industry – Indian automotive industry has grown at CGAR of 16% in last 5 years. Current usage of aluminum extrusions in automotive industry is limited to engine mounts radiator frames, brake components, seat frames & few other market applications. It consumes 8% of the total produce.

Transportation – Metros are being launched in many cities across India and transport sector is growing rapidly and with it the demand for aluminum extrusions are also increasing day by day. At present Transport sector consumes 17% of the total aluminum extrusion produced within the country.

Other Sector – Production for aluminum extrusion for other sectors like packaging and consumer durables was valued at 12% of the total produce. These industries are currently facing a lull in growth but are expected to come back on track in following years.

DEMAND DRIVERS FOR COPPER

Electrical & Electronic Market

Electrical and electronic is the largest market for copper products, accounting for almost 34% and over 2 billion pounds of copper consumption. The four market segments that make up this market are power utilities; telecommunications; business electronics; lighting & wiring devices. A key driver for power utilities is electrical distribution and control, which includes transformers, switchgear and industrial circuit breakers, and industrial controls. Electrical distribution and control in turn is driven by both residential and nonresidential construction.

Transportation Products Market

Transport market is composed of automobile, railroad, truck & bus, aircraft and marine. It is the fastest growing market, with a 5.5% compound annual growth rate over the past eight years. Copper consumption of transport market is 11% of the total production.

Building Construction Market

Building construction is composed of the following market segments building wiring; plumbing & heating; air conditioning & refrigeration; builders' hardware and architectural. Building construction market consumes 8% share of the total copper produce. Building construction has two key market drivers residential and nonresidential construction.

Telecommunications

An important sector of telecommunications, for copper, is telephone and telegraph equipment, which accounts for over one-half of total factory sales of India. The strong growth in construction along with the increasing popularity of the Internet is helping to propel this strong growth. Many households are installing second lines to hook up their computers to the Internet, allowing them to maintain phone access as well. Another area is premises wiring. This wire is used for network wiring of computers in buildings and uses twisted pair copper wires. This sector consumes 2% of the total market produce.

Consumer & General Products Market

Consumer and general products, with a 44% growth rate, is rapidly growing market, accounting for 8% of copper consumption. Consumer and general products is the broadest of the five markets, composed of the following eight market segments appliances; ordnance; musical instruments, toys, and medallions; household products; consumer electronics; fasteners & closures; coinage and utensils & cutlery.

Others - Other sectors such as Defense, Engineering etc consume 37% of the total copper production.

BENEFITS OF ALUMINIUM EXTRUSIONS:

High strength-to-weight ratio: Aluminum is the most preferred metal to extrude, as it is very light in weight. Aluminum extrusions make very strong parts of relatively lighter weight.

Anti corrosive nature: In its natural state, aluminum forms a thin layer of oxide on its surface that prevents corrosion. The extrusion process further adds to this oxide layer, enhancing its anti-corrosion properties.

Cost effectiveness: Aluminum extrusion is extremely cost effective when compared with extrusion of other metals. It produces a complete unit or small parts that can be interlocked with other metal parts to form a complete structure.

Flexibility of size and shapes: Aluminum extrusions in various forms and shapes are comparatively easier to procure than that of other metals and non-metals. Aluminium extrusion dies are easy and relatively inexpensive to install and maintain.

Adaptability to high temperatures: When exposed to high temperatures, aluminium extrusions do not release harmful vapors.

Thermal and electrical conductivity: Aluminium extrusions have efficient electrical conductivity and hence are used in electric connectors. Their excellent thermal conductivity also facilitates their use in heat exchanger applications.

BENEFITS OF COPPER WIRES

Tensile strength - Tensile strength measures the force required to pull an object such as rope, wire, or a structural beam to the point where it breaks. The tensile strength of a material is the maximum amount of tensile stress it can take before breaking.

Copper's higher tensile strength (200–250 N/mm² annealed) compared to aluminum (100 N/mm² for typical conductor alloys) is another reason why copper is used extensively in the building industry. Copper's high strength resists stretching, neck-down, creep, nicks and breaks, and thereby also prevents failures and service interruptions.

Strength and ductility combination - Usually, the stronger a metal is, the less pliable it is. This is not the case with copper. A unique combination of high strength and high ductility makes copper ideal for wiring systems. At junction boxes and at terminations, for example, copper can be bent, twisted, and pulled without stretching or breaking.

Corrosion resistance - Corrosion is the unwanted breakdown and weakening of a material due to chemical reactions. Copper resists corrosion from moisture, humidity, industrial pollution, and other atmospheric influences. However, any corrosion oxides, chlorides, and sulfides that do form on copper are conductive. Therefore, copper connections and terminations will not overheat from corrosion.

Under many application conditions copper is higher on the galvanic series than other common structural metals, meaning that copper wire is less likely to be corroded in wet conditions.

Coefficient of thermal expansion - Metals and other solid materials expand upon heating and contract upon cooling. This is an undesirable occurrence in electrical systems. Copper has a low coefficient of thermal expansion for an electrical conducting material.

Ease of installation - The inherent strength, hardness, and flexibility of copper building wire make it very easy to work with. Copper wiring can be installed simply and easily with no special tools, washers, pigtails, or joint compounds. Its flexibility makes it easy to join, while its hardness helps keep connections securely in place. It has good strength for pulling wire through tight places ("pull-through"), including conduits. It can be bent or twisted easily without breaking. It can be stripped and terminated during installation or service with far less danger of nicks or breaks. And it can be connected without the use of special lugs and fittings. The combination of all of these factors makes it easy for electricians to install copper wire.

Competitive Strength and Market Position of the Business - Our Company is enjoying an excellent brand value among the OEMs and repairers of Submersible Motor, Transformers and AC/DC Motors. Our Company is competing against the Large Scale Industries, like, Ramratna group, Precision Wires, etc. We stand against the competition due to the commitment to supply consistent quality, meeting customers' requirements and continual improvement of the product.

Product Uniqueness and Innovation - The production team of our Company has developed Submersible winding wires for Motor pumps. The uniqueness of our products is that, it can bear heavy fluctuation of voltage (which is the general problem in the villages of India), temperature index, lesser thickness of insulation and triple layers of insulation give an extra strength against accidental/electrical faults. Our production team has further reduced the thickness of the insulation to 0.15 mm with the same properties as a result of which, cost of submersible Motor Pumps has further reduced. We have an experienced team that is engaged in research to achieve better quality and cost competitive products.

Process Quality and Technology - The process of manufacturing of Polyester & Polypropylene Insulated Winding Wire for Submersible Motor Pumps was completely manual and very lengthy. Our Company has upgraded to the semi-automatic plant. Through our semi-automatic plant, we are focusing on automation of fault finding system and is using testing equipment, which is latest in the industry. The stringent quality measures adopted by our Company help us in maintaining not only quality inventory but also providing quality products to our customers. There is a 4 stage of visual inspection for the fault finding and 3 stages of testing process through machines or equipment. For the new products, the Company has acquired state-of-art plant and machineries available in India.

Financial Performance – Being a SME, there is always a paucity of funds, which bring hurdles in path of achieving goals in time. Presently, we are getting the financial assistance from Bank of India and other financial institutions. Due to increased competition, we sell our products on credit basis which helps us in strengthening our relationship with existing customers and in turn increase our clientele too thereby boosting our revenues and financial performance.

Value Creation for Customers, Employees and Society – We are supplying high quality products at very competitive prices due to our constant innovations, state-of-art technology and timely supply of materials. Our Company has been maintaining good relations with workforce over the years, which has been one of the instrumental factors of our success. We keep our workforce satisfied and motivated by remunerating them well and providing them with good working conditions. We believe in our constant research and development which enable us to remain ahead of competition and lowering down the cost of submersible motor pumps and thus making it economical for common man and small farmers. Our quality product, reduces installation, repair and re-installation cost to minimum, which helps farmers and common man financially. All this has created a large demand of submersible pumps in general public. Due to our new products, the surrounding manufacturers of the transformer and motors get the material in cost effective manner.

Vision/Mission and roadmap to achieve the same - The vision of our Company is to become a leading manufacturer in all the fields of Wires & Cables and Aluminium Extrusions.

We have already started the work in this regard and diversify the business in other fields too. Recently we have also installed the PVC Wire & Cable Plant for catering that field and also enhancing the capacity of Aluminium Extrusions.

To complement the efforts of our technical team, we like to give assurance to our esteemed customers that every coil/length is thoroughly tested before it comes out of Factory.

Our testing and development laboratory is established for improvements in products' design, quality and development for special and new products. These high quality tools achieve the various technical parameters for physical, electrical and chemical properties of different types and sizes of wires, Strips and cables.

We take following steps for quality:

- After procuring best type of raw material from direct sources, we do basic test of raw material before processing.
- All types of test and routine test advised by Indian/International standards are made to ensure quality.

All the quality methods are being maintained at our works for raw material, in process and final inspections.

Insulated Copper Winding Wire Manufacturing Process

MANUFACTURING PROCESS COPPER WINDING WIRE

The basic components for cable manufacturing are conductors (Copper/Alloy), PVC/XLPE, Dielectric Insulation, Inner Sheath, G.I. Wire, Armouring and Outer Sheath. The manufacturing of cables involves the following steps –

**Drawing:**

Wires are drawn in required sizes as per the specification by using Copper /Aluminum as well as Alloy conductor of required specification.

Annealing:

The drawn wires are then softened by heating and slow cooling. This process is called annealing. Our installed an automatic annealing system, which helps us in strengthening the drawn wires.

Stranding:

The next step is stranding in which wires are grouped together in order to make the cables more flexible. In this process, smaller individual wires are twisted or bunched together to produce larger number of wires that are more flexible than solid wires of similar size. A thin coat of a specific material is coated, usually tin, on the individual wires, which provides better solder ability.

Insulation:

Insulation is a process in which the conductors/cables are covered with material as per the requirement to provide the insulating properties required by the user according to the customer's specification. Cables are manufactured with both thermoplastic and thermosetting insulation, insulated with PVC/PE/XLPE as required by the specification. Insulation for the cables is strictly done and applied over conductors by extrusion through the electrical process and undergoes the online H.V. Spark tests.

Core rewinding:

All insulated cores are rewound to the particular required lengths, passing through the electrical stress test i.e. spark test, which are further processed only after passing through the various physical, electrical and mechanical tests.

Cores stranding and laying process:

The next step is stranding, in which insulated wires called cores are grouped together, to make the cables symmetrically round. In this process, smaller individual cores are twisted or cabled together to make larger cores that are round and flexible.

Inner Sheath:

Inner Sheath is a process in which the cables are coated to provide the sheathing properties as required by the user. Cables are manufactured with both thermoplastic and thermosetting extrusion. They are sheathed with PVC/PE/XLPE as required by the specification. Sheathing for the cables is strictly done and applied over insulated cable by extrusion through the electrical process and passing through the online H.V. Spark tests.

Cable Armouring:

Armouring process is conducted on inner sheathed multi core cables. Galvanized steel wires and strips are used for protection of internal cores. This process is required for underground application of electrical power and control cables.

Outer Sheath:

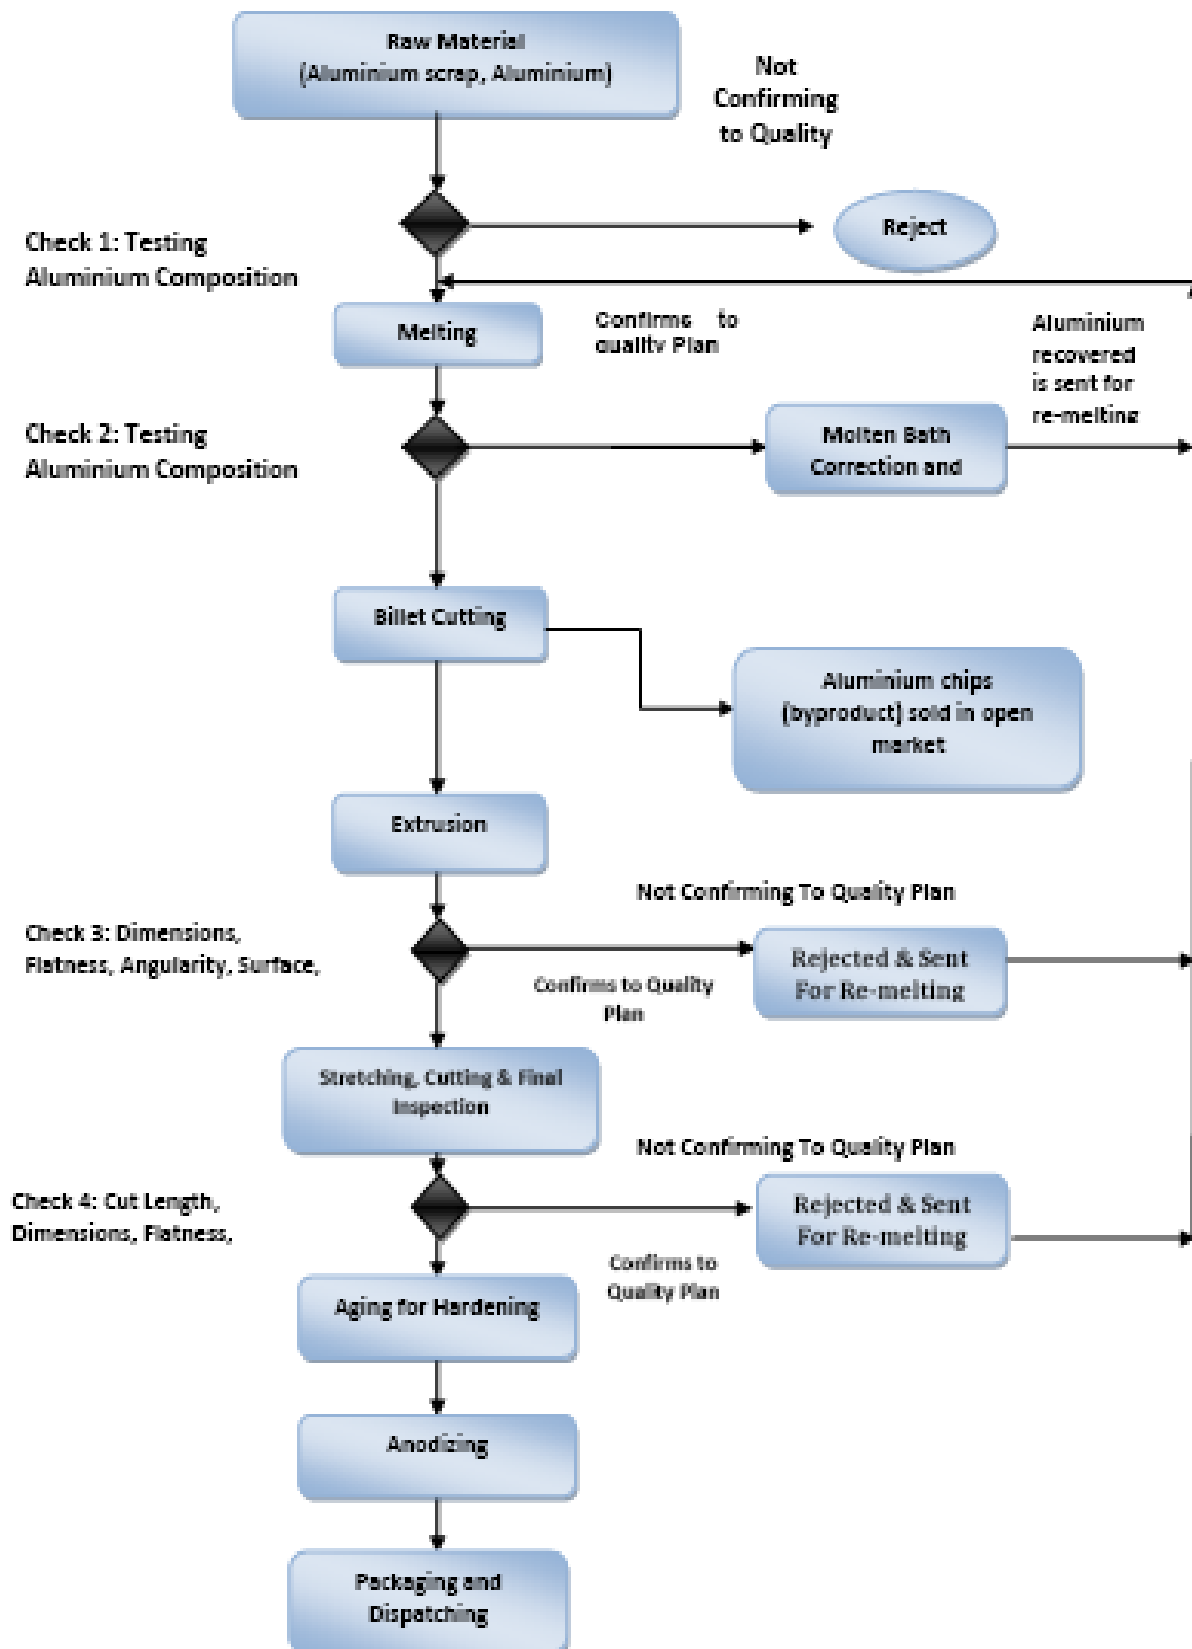

Outer sheath is a process in which the cables are coated to provide the sheathing properties required by the user. Cables are manufactured with both thermoplastic and thermosetting extrusion. They are overall sheathed with PVC/PE/XLPE as required by the specification. Sheathing of the cables is strictly done and applied over armoured or un-armoured cabled cores by extrusion, through the electrical process and passing through the online high voltage spark tests.

Testing and Quality Control:

The cables are tested as per Indian standard specifications to ensure that the cables are free from all defects.

ALUMINUM EXTRUSION MANUFACTURING PROCESS

MANUFACTURING PROCESS OF ALUMINUM EXTRUSIONS

Aluminum extrusions are manufactured at the plant of our Company. Aluminium ingots / scrap are used as raw-materials along with small portion of magnesium to produce the same. Aluminium extrusion products include aluminum channels, aluminum sections, aluminum flat bars, aluminum tubes and other several products out of this extrusion.

The steps in the manufacturing process are as under:

1. **Procurement of raw material (aluminium ingots/ scrap)** - Aluminum ingots / scrap are used as the major raw material in the entire aluminum extrusion process. Such raw materials are readily available and we purchase the same from domestic and overseas vendors.

2. **Melting Process** – Aluminium scrap is melted in the melting oven (furnace) at the temperature 750°C. Chemicals are used to remove impurities. During melting, such impurities in the aluminium scrap are removed in the form of dross, which is treated separately in a dross recovery machine. Molten aluminium is recovered in the hot top casting equipment, which is treated with water (known as molten bath) to convert it into aluminium logs of approximate height of 16 ft and weight of 190 kgs through molding. The quality of the aluminium so recovered in this process is again checked on sample basis by spectrometer to confirm that the aluminium content in it is as per the quality plan. Cranes are used to remove aluminium logs from the hot top casting equipment.

3. **Dross Recovery Process** – The dross removed from the melting process is treated in the dross recovery machine, where small quantities of aluminium present, if any is removed and the same is re-melted in the melting oven. The residual dross is sold in the open market.

4. **Billet Cutting** – Billets are small size of logs; which are used in the extrusion process for making aluminium profile. The aluminium logs are placed on the billet cutting machine for converting into aluminium billets. A coolant (cutting oil) and water is used as lubricant to facilitate cutting the log into billet. The billets so produced are of varied lengths depending on the kind of aluminium profile to be extruded in the next process. Also, its diameters are 140 mm and 85 mm considering its further processing in aluminium extrusion press machine. During this process, aluminium chips are recovered as a by-product and are sold in the open market as scrap.

5. **Extrusion Process** – The term 'Extrusion' is usually applied to both; the process and the product obtained. Extrusion is the process of shaping aluminium, by forcing it to flow through a shaped opening in a die. Extruded material emerges as an elongated piece with the same profile as the die opening. It is the hot working reformation of aluminium and aluminium alloys where in aluminium billets are reshaped during its plastic state applying horizontal force with an automotive Extrusion Press.

The steps in the Extrusion Process are as follows:

- a) Billets are heated to approximately 4000C to 4250C in the billet heating machine. At this point, it is solid but soft.
- b) After a billet reaches the desired temperature, it is transferred to the loader where a thin film of smut or lubricant is added to the billet and to the ram. The smut (lubricant) acts as a parting agent, which keeps the two parts from sticking together. The billet is then transferred to the cradle.
- c) The billet is set between the die and a dummy block, which pushes against the billet and forces it through the die. The ram applies pressure to the dummy block, which in turn, pushes the billet until it is inside the container.
- d) Under pressure the billet is crushed against the die, becoming shorter and wider until it has full contact with the container walls. While the aluminum is pushed through the die, air flows around some sections of the die to cool it. This increases the life of the die and creates an inert atmosphere, which keeps oxides from forming on the shape being extruded.
- e) As a result of the pressure added to the billet, the soft but solid metal begins to squeeze through the die opening.
- f) The extrusions are pushed out of the die to the stretcher, which guides metal down the run-out table during extrusion. While being pulled, the extrusion is cooled by air.

g) Not all of the billets can be used. The remainder (butt) contains oxides from the billet skins. The butt is shredded off and discarded while another billet is loaded and welding to the previous loaded billet and the extrusion process continues.

h) When the extrusion reaches desired length, the extrusion is cut with a profile saw or a shear.

j) The Company has installed hot log shearing machine cuts aluminium bars according to the technical requirement of extrusion to meet the demand of the extruder. The cutting is regular and smooth, favorable to extrusion shaping. The shearing blades ensure the cutting quality.

i) Metal is transferred (via walking beam systems) from the run-out table to the cooling table.

We have to compete with different players in different regions.

We compete with other manufacturers on the basis of product range, product quality, and product price including factors, based on reputation, regional needs, and customer convenience. While these factors are key parameters the in client's decisions matrix in purchasing goods; product range, product quality and product price is often the deciding factor in most deals. Our competitors are many and include companies like Ram Ratna Wires Limited, Precision Wires Limited, Nissan Copper Limited, Century Extrusions Limited to name a few.

Due to industry's fragmented nature, there is no authentic data available to our Company on total industry size and markets share of our Company vis-a-vis the competitors.

The Companies Act, 1956

The Act deals with laws relating to companies and certain other associations. It was enacted by the parliament in 1956. The Companies Act primarily regulates the formation, financing, functioning and winding up of companies. The Act prescribes regulatory mechanism regarding all relevant aspects including organizational, financial and managerial aspects of companies. Regulation of the financial and management aspects constitutes the main focus of the Act. In the functioning of the corporate sector, although freedom of companies is important, protection of the investors and shareholders, on whose funds they flourish, is equally important. The Companies Act plays the balancing role between these two competing factors, namely, management autonomy and investor protection.

The respective provisions of the companies Act, 2013 which has been notified on August 30, 2013, shall replace the existing provisions of the Companies Act, 1956, as and when such provisions contained in the Companies Act, 2013 are notified from time to time.

Industrial (Development and Regulation) Act, 1955, as amended (the "I(D&R) Act")

The I(D&R) Act has been liberalized under the New Industrial Policy dated July 24, 1991, and all industrial undertakings are exempt from licensing except for certain industries such as distillation and brewing of alcoholic drinks, cigars and cigarettes of tobacco and manufactured tobacco substitutes, all types of electronic aerospace and defence equipment, industrial explosives including detonating fuses, safety fuses, gun powder, nitrocellulose and matches and hazardous chemicals and those reserved for the small scale sector.

An industrial undertaking which is exempt from licensing is required to file an Industrial Entrepreneurs Memorandum ("IEM") with the Secretariat for Industrial Assistance, Department of Industrial Policy and Promotion, Ministry of Commerce and Industry, Government of India, and no further approvals are required.

Penalty for the contravention of the provisions of the Water Act include imposition of fines or imprisonment or both.

The Central Pollution Control Board has powers, inter alia, to specify and modify standards for streams and wells, while the State Pollution Control Boards have powers, inter alia, to inspect any sewage or trade effluents, and to review plans, specifications or other data relating to plants set up for treatment of water, to evolve efficient methods of disposal of sewage and trade effluents on land, to advise the State Government with respect to the suitability of any premises or location for carrying on any industry likely to pollute a stream or a well, to specify standards for treatment of sewage and trade effluents, to specify effluent standards to be complied with by persons while causing discharge of sewage, to obtain information from any industry and to take emergency measures in case of pollution of any stream or well. A central water laboratory and a state water laboratory have been established under the Water Act.

The Water (Prevention and Control of Pollution) Cess Act, 1977, as amended (the “Water Cess Act”)

Under this statute, every person carrying on any industry is required to pay a cess calculated on the basis of the amount of water consumed for any of the purposes specified under the Water Cess Act at such rate not exceeding the rate specified under the Water Cess Act. A rebate of up to 25% on the cess payable is available to those persons who install any plant for the treatment of sewage or trade effluent, provided that they consume water within the quantity prescribed for that category of industries and also comply with the provision relating to restrictions on new outlets and discharges under the Water Act or any standards laid down under the EPA. For the purpose of recording the water consumption, every industry is required to affix meters as prescribed. Penalties for noncompliance with the obligation to furnish a return and evasion of cess include imprisonment of any person for a period up to six months or a fine of ₹ 1,000 or both and penalty for non-payment of cess within a specified time includes an amount not exceeding the amount of cess which is in arrears.

The State Pollution Control Board is required to grant consent within a period of four months of receipt of an application, but may impose conditions relating to pollution control equipment to be installed at the facilities. No person operating any industrial plant in any air pollution control area is permitted to discharge the emission of any air pollutant in excess of the standards laid down by the State Pollution Control Board.

The penalties for the failure to comply with the provisions of the Air Act include imprisonment of up to six years and the payment of a fine as may be deemed appropriate. In the absence of registration, contract labour cannot be employed in the establishment. Likewise, every contractor to whom the CLRA Act applies is required to obtain a license and not to undertake or execute any work through contract labour except under and in accordance with the license issued. The CLRA Act imposes certain obligations on the contractor in relation to establishment of canteens, rest rooms, drinking water, washing facilities, first aid, other facilities and payment of wages. However, in the event the contractor fails to provide these amenities, the principal employer is under an obligation to provide these facilities within a prescribed time period. Penalties, including both fines and imprisonment, may be levied for contravention of the provisions of the CLRA Act.

Income-tax Act, 1961

The Income Tax Act, 1961 deals with the taxation of individuals, corporates, partnership firms and others. As per the provisions of this Act the rates at which they are required to pay tax is calculated on the income declared by them or assessed by the authorities, after availing the deductions and concessions accorded under the Act. The maintenance of Books of Accounts and relevant supporting documents and registers are mandatory under the Act.

Excise Regulations

The Central Excise Act, 1944 seeks to impose an excise duty on excisable goods which are produced or manufactured in India. The rate at which the said duty is sought to be imposed is contained in the Central Excise Tariff Act, 1985. However, the Government has the power to exempt certain specified goods from excise duty, by notification. Steel products are classified under Chapter 72 and 73 of the Central Excise Tariff Act and presently attract an ad-valorem excise duty at the rate of 8% and also an Education Cess of 2% over the duty element.

Customs Regulations

All imports in the country are subject to duties under the Customs Act, 1962 at the rates specified under the Customs Tariff Act, 1975. However, the Government has the power to exempt certain specified goods from excise duty, by notification. The current custom duty on non-alloy steel is 5% and the custom duty on iron and steel is 10%.

Service Tax

In accordance with Rule 6 of Service tax Rules, every assessee is required to pay Service tax by 5th of the month immediately following the month to which it relates. Further under Rule 7 (1) of Service Tax Rules, the company is required to file a half yearly return by 25th of the month immediately following the half year to which the return relates.

Central Sales Tax Act, 1956 (“Central Sales Tax Act”)

The Central Sales Tax Act formulates principles for determining (a) when a sale or purchase takes place in the course of inter-state trade or commerce; (b) when a sale or purchase takes place outside a State and (c) when a sale or purchase takes place in the course of imports into or export from India. This Act provides for levy, collection and distribution of taxes on sales of goods in the course of inter-state trade or commerce and also declares certain goods to be of special importance in inter-State trade or commerce and specifies the restrictions and conditions to which State laws imposing taxes on sale or purchase of such goods of special importance (called as declared goods) shall be subject. Central Sales tax is levied on inter State sale of goods. Sale is considered to be inter-state when (a) sale occasions movement of goods from one State to another or (b) is effected by transfer of documents during their movement from one State to another.

A sale or purchase of goods shall be deemed to take place in the course of inter-state trade or commerce if the sale or purchase is affected by a transfer of documents of title to the goods during their movement from one state to another. When the goods are handed over to the carrier, he hands over a receipt to the seller. The seller sends the receipt to buyer. The buyer gets delivery of goods on submission of the receipt to the carrier at other end. The receipt of carrier is ‘document of title of goods’. Such document is usually called Lorry Receipt (LR) in case of transport by Road or Air Way Bill (AWB) in case of transport by air. Though it is called Central Sales Tax Act, the tax collected under the Act in each State is kept by that State only. Central Sales Tax is payable in the State from which movement of goods commences (that is, from which goods are sold). The tax collected is retained by the State in which it is collected. The Central Sales Tax Act is administered by sales tax authorities of each State. The liability to pay tax is on the dealer, who may or may not collect it from the buyer.

Value Added Tax

Value Added Tax (“VAT”) is a system of multi-point levy on each of the entities in the supply chain with the facility of set-off input tax whereby tax is paid at the stage of purchase of goods by a trader and on purchase of raw materials by a manufacturer. Only the value addition in the hands of each of the entities is subject to tax. VAT is based on the value addition of goods, and the related VAT liability of the dealer is calculated by deducting input tax credit for tax collected on the sales during a particular period. VAT is essentially a consumption tax applicable to all commercial activities involving the production and distribution of goods, and each State that has introduced VAT has its own VAT Act, under which, persons liable to pay VAT must register themselves and obtain a registration number.

Consumer Protection Act, 1986

The Consumer Protection Act, 1986 (“COPRA”) aims at providing better protection to the interests of consumers and for that purpose makes provisions for the establishment of authorities for the settlement of consumer disputes. The COPRA provides a mechanism for the consumer to file a complaint against a trader or service provider in cases of unfair trade practices, restrictive trade practices, defects in goods, deficiency in services, price charged being unlawful and goods being hazardous to life and safety when used. The COPRA provides for a three tier consumer grievance redressal mechanism at the national, state and district levels. Non compliance of the orders of these authorities attracts criminal penalties.

Indian Contract Act 1872

Indian Contract Act 1872 is the main source of law regulating contracts in Indian law, as subsequently amended. It is not a complete and exhaustive law on all types of contracts. It determines the circumstances in which promise made by the parties to a contract shall be legally binding on them. Each contract creates some right and duties upon the contracting parties. Indian contract deals with the enforcement of these rights and duties upon the parties. As per the provisions of the Indian Contract Act all agreements are contracts if they are made by the free consent of the parties competent to contract, for a lawful consideration and with a lawful object and are not expressly declared to be void. The parties to a contract must either perform or offer to perform their respective promises unless such performance is dispensed with or excused

under the provisions of the Act or of any other law. When a contract has been broken the party who suffers by such breach is entitled to receive from the party who has broken the contract, compensation for any loss or damage caused to him thereby, which naturally arose in the usual course of things from such breach or which the parties knew, when they made the contract, to be likely to result from the breach of it. The Indian Contract Act also lays down provisions of indemnity, guarantee, bailment and agency. Provisions relating to sale of goods and partnership which were originally in the act are now subject matter of separate enactments viz., the Sale of Goods Act and the Indian Partnership Act.

Laws relating to Intellectual Property

In India, trademarks enjoy protection both statutory and under common law. The Trademarks Act, 1999, as amended (“**Trademarks Act**”), the Copyright Act, 1957, as amended (“**Copyrights Act**”), The Patents Act, 1970, as amended (“**Patents Act**”), and the Designs Act, 2000, as amended (“**Designs Act**”), amongst others govern the law in relation to intellectual property, including brand names, trade names and service marks, layout and research works.

Trademarks Act

The Trade Marks Act provides for the application and registration of trademarks in India. The purpose of the Trade Marks Act is to grant exclusive rights to marks such as a brand, label and heading and to obtain relief in case of infringement for commercial purposes as a trade description. The registration of a trademark is valid for a period of 10 years, and can be renewed in accordance with the specified procedure.

Application for trademark registry has to be made to Controller-General of Patents, Designs and Trade Marks who is the Registrar of Trademarks for the purposes of the Trade Marks Act. The Trade Marks Act prohibits any registration of deceptively similar trademarks or chemical compound among others. It also provides for penalties for infringement, falsifying and falsely applying trademarks.

Copyrights Act

The Copyrights Act governs copyright protection in India. Under the Copyright Act, copyright may subsist in original literary, dramatic, musical or artistic works, cinematograph films, and sound recordings. Following the issuance of the International Copyright Order, 1999, subject to certain exceptions, the provisions of the Copyright Act apply to nationals of all member states of the World Trade Organization.

While copyright registration is not a prerequisite for acquiring or enforcing a copyright, registration creates a presumption favoring ownership of the copyright by the registered owner. Copyright registration may expedite infringement proceedings and reduce delay caused due to evidentiary considerations. Once registered, the copyright protection of a work lasts for 60 years.

The remedies available in the event of infringement of a copyright under the Copyright Act include civil proceedings for damages, account of profits, injunction and the delivery of the infringing copies to the copyright owner. The Copyright Act also provides for criminal remedies, including imprisonment of the accused, imposition of fines and seizure of infringing copies.

Patents Act

The purpose of a patent act in India is to protect inventions. Patents provide the exclusive rights for the owner of a patent to make, use, exercise, distribute and sell a patented invention. The patent registration confers on the patentee the exclusive right to use, manufacture and sell his invention for the term of the patent. An application for a patent can be made by (a) person claiming to be the true and first inventor of the invention; (b) person being the assignee of the person claiming to be the true and first inventor in respect of the right to make such an application; and (c) legal representative of any deceased person who immediately before his death was entitled to make such an application. Penalty for the contravention of the provisions of the Patents Act include imposition of fines or imprisonment or both.

Designs Act

The objective of design law is to promote and protect the design element of industrial production. It is also intended to promote innovative activity in the field of industries. The Controller General of Patents, Designs and Trade Marks appointed under the Trademarks Act shall be the Controller of Designs for the purposes of the Designs Act. When a design is registered, the proprietor of the design has copyright in the design during ten years from the date of registration.

The Shops and Establishments Legislations

Under the provisions of local shops and establishments legislations applicable in the states in which establishments are set up, establishments are required to be registered. Such legislations regulate the working and employment conditions of the workers employed in shops and establishments including commercial establishments and provide for fixation of working hours, rest intervals, overtime, holidays, leave, termination of service, maintenance of shops and establishments and other rights and obligations of the employers and employees. Our Company's offices have to be registered under the shops and establishments laws of the state where they are located.

Competition Act, 2002, as amended (the "Competition Act")

The Competition Act prohibits anti competitive agreements, abuse of dominant positions by enterprises and regulates "combinations" in India. The Competition Act also established the Competition Commission of India (the "CCI") as the authority mandated to implement the Competition Act. The provisions of the Competition Act relating to combinations were notified on March 4, 2011 and have come into effect on June 1, 2011. Combinations which are likely to cause an appreciable adverse effect on competition in a relevant market in India are void under the Competition Act. A combination is defined under Section 5 of the Competition Act as an acquisition, merger or amalgamation of enterprise(s) that meets certain asset or turnover thresholds. There are also different thresholds for those categorized as 'Individuals' and 'Group'. The CCI may enquire into all combinations, even if taking place outside India, or between parties outside India, if such combination is likely to have an appreciable adverse effect on competition in India. Effective June 1, 2011, all combinations have to be notified to the CCI within 30 days of the execution of any agreement or other document for any acquisition of assets, shares, voting rights or control of an enterprise under Section 5(a) and (b) of the Competition Act (including any binding document conveying an agreement or decision to acquire control, shares, voting rights or assets of an enterprise); or the board of directors of a Company (or an equivalent authority in case of other entities) approving a proposal for a merger or amalgamation under Section 5(c) of the Competition Act. The obligation to notify a combination to the CCI falls upon the acquirer in case of an acquisition, and on all parties to the combination jointly in case of a merger or amalgamation.

Central Laws that may be applicable to our Company's operations include the Land Acquisition Act, 1894, the Transfer of Property Act, 1882, Registration Act, 1908, Indian Stamp Act, 1899, and Indian Easements Act, 1882.

In addition, regulations relating to classification of land may be applicable. Usually, land is broadly classified under one or more categories such as residential, commercial or agricultural. Each state and city has its own set of laws, which govern planned development and rules for construction (such as floor area ratio or floor space index limits). The various authorities that govern building activities in states are the town and country planning department, municipal corporations and the urban arts commission.

SIGNIFICANT ACCOUNTING POLICIES & NOTES TO RESTATED SUMMARY STATEMENT

I. SIGNIFICANT ACCOUNTING POLICIES:

Basis of preparation of financial statements

These financial statements are prepared under the historical cost basis of accounting and evaluated on a going concern basis, with revenues and expenses accounted for on their accrual to comply in all material aspects with the applicable accounting principles and applicable Accounting Standards notified U/s. 211(3C) of the Companies Act, 1956 and other relevant provisions of the Companies Act, 1956.

Use of estimates

The preparation of financial statements require estimates and assumptions to be made that affect the reported balances of assets as on the date of the financial statements and the reported amount of revenues and expenses during the reporting period. Accounting estimates could change from period to period. Actual results could differ from these estimates. Appropriate changes in estimates are made as and when the Management becomes aware of the changes in the circumstances surrounding the estimates. Changes in estimates are reflected in the financial statements in the period in which the changes are made and if material, their effects are disclosed in the notes to the financial statements

The following significant accounting policies are adopted in the preparation and presentation of these financial statements:

1. Revenue recognition

Revenue is recognized to the extent that it is probable that the economic benefits will flow to the company and the revenue can be reliably measured..

2. Fixed assets

(i) Fixed assets shown under gross block are valued at cost of acquisition inclusive of inward freight, duties and taxes and incidental expenses related to acquisition and also include cost of installation wherever incurred.

(ii) Depreciation on fixed assets has been charged on written down value basis, pro-rata for the period of use, by adopting the revised rates of depreciation specified in Schedule XIV of the Companies Act, 1956.

3. Inventories

Inventories of Raw Materials, Finished Goods and Waste & Scrap are stated at cost or net realisable value, whichever is lower. Cost comprises all cost of purchase, cost of conversion and other costs incurred in bringing the inventories to their present location and condition. The excise duty in respect of closing inventory of finished goods is included as part of finished goods. Cost formula used is 'Average cost'. Due allowance is estimated and made for defective and obsolete items, wherever necessary, based on the past experience of the Company.

4. Investments

Long term Investments are valued at cost. Provision for diminution is made to recognise a decline, other than temporary, in the value of investments. Current investments are stated at lower of cost or market value.

5. Employee benefits

(a) Defined-contribution plans:

Defined contribution to provident fund is charged to the profit and loss account on accrual basis.

(b) Defined-benefit plan:

Provision for gratuity liability is provided based on actuarial valuation made at the in the year 2012-13 covering all the period of five years.

6. Foreign exchange transactions

(i) All receipts and expenditure in foreign currencies are recorded at rates prevailing on the date when the relevant transaction took place.

(ii) All monetary assets and liabilities denominated in foreign currency are restated at the rates ruling at the year end and all exchange gains/ losses arising thereon are adjusted to the statement of profit and loss account.

7. Borrowing costs

Borrowing costs that are directly attributable to the acquisition or construction of a qualifying asset are capitalized as part of the cost of that asset till such time the asset is ready for its intended use. Other Borrowing Costs are recognized as an expense in the period in which they are incurred.

8. Taxes on income

Current tax - Provision for current tax is made based on tax liability computed after considering tax allowances and exemptions.

Deferred tax - Deferred tax is recognized on timing differences between the accounting income and the taxable income for the year and quantified using the tax rates and laws enacted or substantively enacted as on the Balance Sheet date. Deferred tax assets are recognized and carried forward to the extent that there is a reasonable or virtual certainty, as may be applicable, that sufficient future taxable income will be available against which such deferred tax asset can be realized.

9. Earnings per share:

Annualized earnings/ (loss) per Equity Share (basic and diluted) is arrived at based on Net Profit/ (Loss) after Taxation to the weighted average number of Equity Shares.

10. Impairment of assets

An impairment loss is charged to the Statement of profit and loss in the year in which an asset is identified as impaired. The impairment loss recognized in prior accounting period is reversed if there has been a change in the estimate of recoverable amount

11. Provisions and contingent liabilities

Based on the best estimate of the management, provisions are determined of the outflow of economic benefits which are required to settle the obligation as at the reporting date. Where no reliable estimate can be made, disclosure is made as contingent liability. A disclosure for a contingent liability is also made when there is a possible obligation that may, but probably will not, require an outflow of the Company's resources.

12. Cash flows are reported using the indirect method, whereby profit before tax is adjusted for the effects of transactions of non-cash nature, any deferrals or accruals of past or future operating cash receipts or payments and item of income or expenses associated with investing or financing cash flows. Cash flows from operating, investing and financing activities of the Company are segregated, accordingly.

While the Industrial Policy, 1991 prescribes the limits and the conditions subject to which foreign investment can be made in different sectors of the Indian economy, FEMA regulates the precise manner in which such investment may be made. Under the Industrial Policy, unless specifically restricted, foreign investment is freely permitted in all sectors of Indian economy up to any extent and without any prior approvals, but the foreign investor is required to follow certain prescribed procedures for making such investment. Foreign investment is allowed up to 100% under automatic route in our Company.

India's current Foreign Direct Investment ("FDI") Policy issued by the Department of Industrial Policy and Promotion, Ministry of Commerce and Industry, GoI ("DIPP") by circular 1 of 2012, with effect from April 10, 2012 ("Circular 1 of 2012"), consolidates and supersedes all previous press notes, press releases and clarifications on FDI issued by the DIPP. The Government proposes to update the consolidated circular on FDI Policy once every Year and therefore, Circular 1 of 2012 will be valid until the DIPP issues an updated circular.
