In this Draft Prospectus, any discrepancies in any table between total and the sums of the amount listed are due to rounding off. For further details of legal proceedings involving our Company, our Promoters and Group Companies, please refer to the chapter “**Outstanding Litigation and Material Developments**” on page 211 of this Draft Prospectus. Further, if significant claims are determined against us and we are required to pay all or a portion of the disputed amount, there could be a material adverse effect on our business, results of operations, financial conditions and prospects. We are currently, and may in the future be, implicated in lawsuits in the ordinary course of business, including lawsuits and arbitrations. Litigations and arbitrations could result in substantial costs and a diversion of efforts and attention of our management and/or subject us to significant liabilities to third parties.

2. If we are not able to obtain, renew or maintain the statutory and regulatory permits and approvals required to operate our business it may have a material adverse effect on our business.

We require certain statutory and regulatory permits, licenses and approvals to operate our business. We have not obtained registrations for our registered office and corporate office under Bombay Shops and Establishments Act, 1948. Though we believe that we have obtained other permits and licenses which are adequate to run our business, we cannot assure that there is no other statutory/regulatory requirement which we are required to comply with. Further, some of these approvals are granted for fixed periods of time and need renewal from time to time. We are required to renew such permits, licenses and approvals. There can be no assurance that the relevant authorities will issue any of such permits or approvals in time or at all. Failure by us to renew, maintain or obtain the required permits or approvals in time may result in the interruption of our operations and may have a material adverse effect on our business.

Our operations are subject to many environmental laws and regulations in Maharashtra in which we operate. Such laws and regulations govern, among other things, air emissions, wastewater discharges, waste disposal and the investigation and remediation of soil groundwater contamination. The Central Government has adopted a “zero tolerance” policy regarding effluent, which results from the distillation of molasses into the extra neutral alcohol (“ENA”) which is the base for the majority of liquor products. As a result, we must make certain capital expenditures on treatment of effluent at the facilities in which we undertake such distillation of molasses, referred to as “primary” distillation.

Our Company has made applications for renewal to regulatory authorities for grant of the following Government / statutory approvals and licenses but the same has not been issued to us till date:

S.No.	Nature of Registration / License	Date of Application	Issuing Authority
1.	Certificate of Registration (Amendment) under Maharashtra Contract Labour (regulation and abolition) Rule 1971	November 04, 2015	Asst. Labour Commissioner, Pune

Additionally, we believe that we will be able to renew or obtain such registrations and approvals or permissions, as and when required, there can be no assurance that the relevant authorities will renew or issue any such registrations or approvals in the time frame anticipated by us or at all. If we are unable to renew, maintain or obtain the required registrations or approvals, it may result in the interruption of our operations and may have a material adverse effect on our revenues, profits and operations.

For further details see section on “Government and Other Approvals” beginning on page 223 of the Draft Prospectus.

3. Our business is subject to extensive regulation. If we fail to comply with the applicable regulations prescribed by governments and regulatory agencies, our business, results of operations and financial condition could be adversely affected.

We operate in a highly regulated industry and our operations are subject to extensive regulation in which we do business. We have ongoing obligations to regulatory authorities i.e. Bombay Prohibition Act 1949 and Bombay Rectified Spirit Rules 1951. The penalties for non-compliance with these regulations can be severe, including the revocation or suspension of our business license, imposition of fines in those jurisdictions. For example our manufacturing facilities and sales of our product are subject to verification process by State Excise Inspector. If any inspection results in alerts, the relevant regulator may amend or withdraw our existing approvals to manufacture and market our products in such jurisdiction, which could adversely affect our business, financial condition and results of operations.

The directive principles of our constitution states that the Government should endeavor to implement the prohibition of the manufacturing and sale of liquor products across the country as we provide raw material to liquor manufacturers also. While we believe that the likelihood of prohibition is low, prohibition by a State Government in any of the States in which we operate could happen. Any such prohibition would have a significant effect on the results of our operations and on our ability to operate our business in such State.

If we fail to comply with applicable statutory or regulatory requirements, there could be a delay in the submission or grant of renewal for the manufacturing of our products. Moreover, if we fail to comply with the various conditions attached to such approvals, licenses, registrations and permissions once received, the relevant regulatory body may suspend, curtail or revoke our ability to market such products or impose fines upon us which will adversely affect operation of our Company.

4. There are certain discrepancies noticed in some of our corporate records relating to forms filed with the Registrar of Companies.

Our Company has not complied with certain statutory provisions under the Companies Act, for instance our Company has accepted certain amounts which are classified as deposits under the purview of Section 73 of the Companies Act, 2013 and has accepted loans from Companies in which our directors are interested in the past. Due to absence of professional guidance on the matter, we did not follow the prescribed procedures as laid down under the relevant sections of Companies Act although the deposits and loan from companies are repaid as on date. There are some cases where a form has been filed belatedly in Registrar of Companies for which requisite delayed fees was paid by the Company. Moreover our Company has not filed some form related to creation of charge over movable and immovable property in past. Although such loans are repaid fully and charge created thereon are satisfied as on date. Also our Company has inadvertently filed incorrect Annual Return with respect to the shareholding records, such as the individual shareholding of the shareholders were incorrectly mentioned in the annual returns. Such inappropriate disclosures may liable to statutory penalties in the future.

Additionally our Company may have not complied with some Accounting Standard For instance, Accounting Standards 3, 15, 16, 18 and 21 However, now the Company has made necessary provision for gratuity, leave encashment as per AS 15 and has made necessary compliance in accordance with the Accounting Standards in the re-stated financial statements of the Company. For further details on the same please refer section “***Financial Information of the Company***” beginning on page no. 160 of this Draft Prospectus.

Although no show cause notice have been issued against the Company till date in respect of above, in the event of any cognizance being taken by the concerned authorities in respect of above, penal actions may be taken against the Company and its directors, in which event the financials of the Company and our directors may be adversely affected.

5. Any shortfall in the supply of our raw materials or an increase in raw material costs or other input costs may adversely impact the pricing and supply of our products and have an adverse effect on our business.

Raw materials such as molasses which are used to manufacture of rectified spirit are subject to supply disruptions and price volatility caused by various factors, including commodity market fluctuations, the quality and availability of supply, changes in government programs and regulatory sanctions. Our suppliers may be unable to provide us with a sufficient quantity of our raw materials at a suitable price for us to meet the demand for our products and we may not able to hold sufficient licensed quantity of molasses for smooth supply to our manufacturing process. Additionally there is a risk that one or more of these existing suppliers could discontinue their operations, which could adversely impact our ability to source raw materials at a suitable price and meet our order requirements. Any increase in raw material prices will result in corresponding increases in our product costs.

6. Our Company proposes to utilize Net Proceeds to partly pre-pay certain secured loans and unsecured loans availed by our Company, and accordingly, the utilization of that portion of the Net Proceeds will not result in creation of any tangible assets.

Our Company intends to use Net Proceeds for the purposes of part pre-payment, in full or part, of certain term secured loans and unsecured loan availed by our Company. The details of the loans identified to be repaid or prepaid using the Net Proceeds have been disclosed in the section entitled “***Objects of the Issue***” on page 74 of this Draft Prospectus. However, the repayment of unsecured loan or prepayment of the term loans are subject to various factors including, pre-payment penalty of 2% of the pre-paid amount in case of secured loan. While we believe that utilization of Net Proceeds for repayment of secured and unsecured loans would help us to reduce our cost of debt and enable the utilization of our funds for further investment in business growth and expansion, the pre-payment of loans will not result in the creation of any tangible assets for our Company.

7. If there is a change in policies related to tax, duties or other such levies applicable to us, it may affect our results of operations.

We benefit from certain tax regulations and incentives that accord favorable treatment to our manufacturing facilities. These tax benefits include income tax deductions and excise cenvat credit. For details regarding income tax deductions, please refer to the chapter “***Statement of Tax Benefits***” on page 83 of this Draft Prospectus. New or revised accounting policies or policies related to tax, duties or other such levies promulgated from time to time by the relevant authorities may significantly affect our results of operations. We cannot assure you that we would continue to be eligible for such lower tax rates or any other benefits. The reduction

or termination of our tax incentives, or non-compliance with the conditions under which such tax incentives are made available, will increase our tax liability and adversely affect our business prospects, results of operations and financial condition.

8. Any delay in production at, or shutdown of our manufacturing facilities, could adversely affect our business, results of operations and financial condition.

The success of our manufacturing activities depends on, among other things, the productivity of our workforce, compliance with regulatory requirements and the continued functioning of our manufacturing processes and machinery. Disruptions in our manufacturing activities could delay production or require us to shut down the affected manufacturing facility. Moreover, our products are permitted to be manufactured at our factory that have received specific approvals, and any shut down of such factory will result in us being unable to manufacture such products for the duration of such shut down. Such an event will result in us being unable to meet with our contractual commitments, which will have an adverse effect on our business, results of operation and financial condition.

Additionally, any interruption at our manufacturing facility, including natural or man-made disasters, workforce disruptions, regulatory approval delays, fire or the failure of machinery, could reduce our ability to meet the demand, which could affect our business prospects, results of operations and financial condition. We manufacture highly flammable materials i.e. ethanol and rectified spirit and are therefore subject to the risk of loss arising from fire or explosions. Although we have implemented industry acceptable risk management controls at our manufacturing location and continuously seek to upgrade them, the risk of fire or explosion associated with these materials cannot be completely eliminated.

The registration of any intellectual property right is a time-consuming process, and there can be no assurance that any such registration will be granted. For details please refer to the chapter “**Government and other Approvals**” on page 223 of this Draft Prospectus. In the absence of such registration, competitors or other companies may challenge the validity or scope of our intellectual property. Similarly, in case our trademark are rejected or objected, this could adversely affect our competitive position, business, financial condition and profitability.

Further, if our unregistered trademarks are registered in favour of a third party, we may not be able to claim registered ownership of such trademarks, and consequently, we may be unable to seek remedies for infringement of those trademarks by third parties other than relief against passing off by other entities. Our inability to obtain or maintain registration may adversely affect our competitive business position.

There is no guarantee that all or any of our customers will honor their outstanding amounts in time and whether they will be able to fulfill their obligations, due to any financial difficulties, cash flow difficulties, deterioration in their business performance, or a downturn in the global economy. Consequently, we are exposed to price and supply fluctuations in molasses and other raw materials, and these fluctuations may adversely affect our ability to obtain orders and/or to execute them in a timely manner, which would have a material adverse effect on our business, results of operations and financial condition.

In case of non-availability of raw materials on favourable terms we may have to procure the same at the terms and conditions prevalent at that point. It is important for us to anticipate demand for our products and any failure to anticipate, identify, interpret and react on the basis of anticipated/ desired demand or our failure to generate consumer acceptance, could lead to, among others, reduced demand for our products, which can adversely affect our results of operations.

Efficient inventory management is also a key component of the success of our business, results of operations and profitability. To be successful, we must maintain sufficient inventory levels to meet demand for our products, without allowing those levels to increase to such an extent that the costs associated with storing and holding the inventory adversely affects our results of operations. If our

raw materials purchase decisions do not accurately predict sourcing levels or our expectations about demand for our products are inaccurate, we may either not be able to manufacture products to service the demands, resulting in having market share to competitors or would have to take unanticipated markdowns or impairment charges to dispose of the excess or obsolete inventory, which can adversely affect our results of operations. The fund requirement and deployment mentioned in the Objects of this Issue have not been appraised by any bank or financial institution.

We intend to use entire fresh Issue Proceeds towards repayment of unsecured loan, Secured loan and to meet the issue expenses. We intend to deploy the Net Issue Proceeds in financial year 2016-17 and such deployment is based on certain assumptions and strategy which our Company believes to implement in future. The funds raised from the fresh Issue may remain idle on account of change in assumptions, market conditions, strategy of our Company, etc., For further details on the use of the Issue Proceeds, please refer chapter titled "*Objects of the Issue*" beginning on page 74 of this Draft Prospectus.

The deployment of funds for the purposes described above is at the discretion of our Company’s Board of Directors. The fund requirement and deployment is based on internal management estimates and has not been appraised by any bank or financial institution. Accordingly, within the parameters as mentioned in the chapter titled "*Objects of the Issue*" beginning on page 74 of this Draft Prospectus, the Management will have significant flexibility in applying the proceeds received by our Company from the Issue. Our Board of Directors will monitor the utilization of the proceeds of this Issue.

41. We cannot guarantee the accuracy of statistical, financial and other data or information in this Draft Prospectus which may be incomplete or unreliable.

Certain data relating to our business, matters relating to India, its economy or the industries in which we operate as contained in this Draft Prospectus are subject to the condition that the statistical and other data upon which such discussions are based may be incomplete or unreliable which have been assessed and quantified internally by our Company as no other credible third party sources are available for such data. We have not independently verified data from industry publications and other sources and therefore cannot assure that they are complete or reliable. The assessment of the data is based on our understanding, experience and internal estimates of our business. Although we believe that the data can be considered to be reliable, their accuracy, completeness and underlying assumptions are not guaranteed and their dependability cannot be assured. Statistical and other information in this Draft Prospectus relating to our business, matters relating to India, the Indian economy or the industries in which we operate have been derived from various government and other publications that we believe to be reliable.

42. Failure to comply with environmental laws and regulations could lead to unforeseen environmental litigation which could impact our future net earnings.

We are subject to various national, state, municipal and local laws and regulations concerning environmental protection in India, including laws addressing the discharge of pollutants into the air and water, the management and disposal of any hazardous substances, and wastes and the cleanup of contaminated sites. Environmental laws and regulations in India are becoming more stringent, and the scope and extent of a new environmental regulations, including their effect on our operations, cannot be predicted with any certainty. In case of any change in environmental or pollution regulations, we may be required to invest in, among other things, environmental monitoring, pollution control equipment and emissions management. Further, any violation of the environmental laws and regulations may result in fines, criminal sanctions, revocation of operating permits or shutdown of our facilities. Due to the possibility of unanticipated regulatory or other developments, the amount and timing of future environmental expenditures may vary substantially from those currently anticipated. We cannot assure you that our costs of complying with current and future environmental laws will not adversely affect our business, results of operations or financial condition. In addition, we could incur substantial costs, our products could be restricted from entering certain jurisdictions, and we could face other sanctions, if we were to violate or become liable under environmental laws or if our products become non-compliant with environmental laws. Our potential exposure includes fines and civil or criminal sanctions, third-party property damage or personal injury claims and clean-up costs. Further, liability under some environmental laws relating to contaminated sites can be imposed retroactively, on a joint and several basis, and without any finding of non-compliance or fault. The amount and timing of costs under environmental laws are difficult to predict.

43. Information relating to the estimated installed capacities and historical estimated capacity utilisation of our production facilities included in this Draft Prospectus is based on various assumptions and estimates and future production and capacity utilisation may vary from such estimated installed capacity utilisation.

The estimated installed capacity information and historical estimated capacity utilisation information relating to our production facilities included in this Draft Prospectus is based on various assumptions and estimates of our management, including proposed

operations, assumptions relating to availability and quality of raw materials and assumptions relating to potential utilization levels and operational efficiencies. Actual production levels and utilization rates may differ significantly from the estimated installed capacities or historical estimated capacity utilisation information of our facilities. Undue reliance should therefore not be placed on the estimated installed capacity or historical estimated capacity utilisation information for our existing facilities and the proposed capacity information included in this Draft Prospectus.

44. The average cost of acquisition of Equity Shares by our Promoters could be lower than the Issue Price.

Our Promoters average cost of acquisition of Equity Shares in our Company is lower than the Issue Price decided by the Company in consultation with the Lead Manager. For further details regarding average cost of acquisition of Equity Shares by our Promoters in our Company and build-up of Equity Shares by our Promoters in our Company, please refer to the chapters "*Capital Structure*" beginning on pages 54 of this Draft Prospectus.

45. We have not paid any dividends in the last five Financial Years. Our ability to pay dividends in the future will depend upon future earnings, financial condition, cash flows, working capital requirements and capital expenditures.

Our ability to generate returns for Shareholders is dependent on a host of factors that impact our business and financial condition. Our Company has not paid any dividend on its Equity Shares during the last five Financial Years. The amount of future dividend payments, if any, will depend upon a number of factors, such as our future earnings, financial condition, cash flows, working capital requirements, contractual obligations, applicable Indian legal restrictions, capital expenditures and cost of indebtedness. In addition, our ability to pay dividends may be impacted by a number of factors, including restrictive covenants under the loan or financing agreements our Company may enter into. Even in years in which we may have profits, we may decide to retain all of our earnings to finance the development and expansion of our business and, therefore, may not declare dividends on our Equity Shares. There can therefore be no assurance that we will be able to pay dividends in the future. For further details, see section "*Dividend Policy*" on page 159 of this Draft Prospectus.

46. We will continue to be controlled by our Promoters and Promoter Group after the listing of the Equity Shares in the Issue.

Upon successful completion of the Issue, our Promoters and Promoter Group will collectively control, directly or indirectly, approximately 73.17 % of our outstanding Equity Shares (assuming full subscription to the Issue). As a result, our Promoters and Promoter Group will continue to have the ability to exercise significant control over our Company and all matters requiring shareholder approval, including election of directors, our business strategy and policies, and approval of significant corporate transactions such as mergers and business combinations. The extent of their shareholding in our Company may also have the effect of delaying, preventing or deterring a change in control of our Company, even if such a transaction may be beneficial to the other shareholders. The interests of our Promoters and Promoter Group as controlling shareholders of our Company could be in conflict with the interests of our other shareholders. We cannot assure you that our Promoters and Promoter Group will act to resolve any conflicts of interest in favor of our Company or the other shareholders. For details of our shareholding please refer section titled "*Capital Structure*" beginning on page no. 54 of this Draft Prospectus.

47. You will not be able to immediately sell any of the Equity Shares you subscribe to in this Issue on an Indian stock exchange.

In accordance with Indian law and practice, permission for listing of the Equity Shares will not be granted until after the Equity Shares in this Issue have been allotted. Approval will require all other relevant documents authorizing the sale of the Equity Shares to be submitted. There could be failure or delays in listing the Equity Shares on the Indian Stock Exchanges.

The Equity Shares are proposed to be listed on the Indian Stock Exchanges. Further, pursuant to Indian regulations, certain actions must be completed before the Equity Shares can be listed and trading can commence. Investor's "book entry", or "demat", accounts with Depository Participants are expected to be credited within three Working Days of the date on which the Basis of Allotment is approved by the Designated Stock Exchange. Thereafter, upon receipt of final approval from the Designated Stock Exchange, trading in the Equity Shares is expected to commence within 6 Working Days from Issue Closing Date.

We cannot assure you that the Equity Shares will be credited to the investor's demat account, or that the trading in the Equity Shares will commence in a timely manner or at all. Any failure or delay in obtaining the approvals would restrict your ability to dispose of the Equity Shares.

48. We have issued Equity Shares in the last 12 months at a price which may be lower than the Issue Price.

We have issued Equity Shares in the last 12 months, including Bonus Issue, which may be at a price lower than the Issue Price. For further details, see the section entitled “**Capital Structure**” on page 54 of this Draft Prospectus. We may continue to issue Equity Shares, at a price below the market price of Equity Shares at the time of issuance. The Issue Price is not indicative of the price that will prevail in the open market following listing of the Equity Shares.

49. Government regulation of foreign ownership of Indian securities may have an adverse effect on the price of the Equity Shares.

Foreign ownership of Indian securities is subject to government regulation. In accordance with the foreign exchange regulations currently in force in India, under certain circumstances the RBI must approve the sale of the Equity Shares from a non-resident of India to a resident of India or vice-versa if the sale does not meet the requirements specified by the RBI. The RBI must approve the conversion of the Rupee proceeds from any such sale into foreign currency and repatriation of that foreign currency from India unless the sale is made on a stock exchange in India through a stock broker at the market price. As provided in the foreign exchange controls currently in effect in India, the RBI has provided the price at which the Equity Shares are transferred based on a specified formula, and a higher (or lower, as applicable) price per share may not be permitted. We cannot assure investors that any required approval from the RBI or any other government agency can be obtained on terms favorable to a non-resident investor in a timely manner or at all. Because of possible delays in obtaining requisite approvals, investors in the Equity Shares may be prevented from realizing gains during periods of price increase or limiting losses during periods of price decline. For further details, see the section entitled “**Restrictions on Foreign Ownership of Indian Securities**” on page 290 of Draft Prospectus.

50. There are restrictions on daily movements in the trading price of the Equity Shares, which may adversely affect a shareholder’s ability to sell Equity Shares or the price at which Equity Shares can be sold at a particular point in time.

Following the Issue, our listed Equity Shares will be subject to a daily “circuit breaker” imposed on listed companies by the Stock Exchanges, which does not allow transactions beyond certain volatility in the trading price of the Equity Shares. This circuit breaker operates independently of the index-based market-wide circuit breakers generally imposed by SEBI on Indian stock exchanges. The percentage limit on the Equity Shares’ circuit breaker will be set by the stock exchanges based on historical volatility in the price and trading volume of the Equity Shares. This circuit breaker would effectively limit the upward and downward movements in the trading price of the Equity Shares. As a result of this circuit breaker, there can be no assurance regarding the ability of shareholders to sell Equity Shares or the price at which shareholders may be able to sell their Equity Shares at any particular time.

51. Investors may be subject to Indian taxes arising out of capital gains on the sale of the Equity Shares.

Under current Indian tax laws, unless specifically exempted, capital gains arising from the sale of Equity Shares in an Indian company are generally taxable in India. Any gain realized on the sale of listed equity shares on a stock exchange held for more than 12 months will not be subject to capital gains tax in India if Securities Transaction Tax (“STT”) has been paid on the transaction. STT will be levied on and collected by a domestic stock exchange on which the Equity Shares are sold. Any gain realized on the sale of equity shares held for more than 12 months, which are sold other than on a recognized stock exchange and on which no STT has been paid to an Indian resident, will be subject to long term capital gains tax in India. Further, any gain realized on the sale of listed equity shares held for a period of 12 months or less will be subject to short term capital gains tax in India. Capital gains arising from the sale of the Equity Shares will be exempt from taxation in India in cases where the exemption from taxation in India is provided under a treaty between India and the country of which the seller is resident. Generally, Indian tax treaties do not limit India’s ability to impose tax on capital gains. As a result, residents of other countries may be liable for tax in India as well as in their own jurisdiction on a gain upon the sale of the Equity Shares.

52. Any future issuance of Equity Shares may dilute your shareholding, and significant sales of Equity Shares by our major shareholders, may adversely affect the trading price of our Equity Shares.

Future issuances of equity shares by our Company or significant sales of Equity Shares after this Issue will dilute investor’s holdings in our Company. In addition, the perception that such issuance or sales may occur may adversely affect the trading price of our Equity Shares and impair our future ability to raise capital through offerings of Equity Shares. We cannot predict the effect that significant sales of Equity Shares by major Equity Shareholders or the availability of significant numbers of our Equity Shares for future sale may have on the trading price of our Equity Shares.

EXTERNAL RISK FACTORS

53. Our business is substantially affected by prevailing economic, political and others prevailing conditions in India.

Our Company is incorporated in India, and the all of our assets and employees are located in India. As a result, we are highly dependent on prevailing economic conditions in India and our results of operations are significantly affected by factors influencing the Indian economy. Factors that may adversely affect the Indian economy, and hence our results of operations, may include:

- Any increase in Indian interest rates or inflation;
- Any exchange rate fluctuations;
- Any scarcity of credit or other financing in India, resulting in an adverse impact on economic conditions in India and scarcity of financing of our developments and expansions;
- Prevailing income conditions among Indian consumers and Indian corporations;
- Volatility in, and actual or perceived trends in trading activity on, India's principal stock exchanges;
- Changes in India's tax, trade, fiscal or monetary policies;
- Political instability, terrorism or military conflict in India or in countries in the region or globally, including in India's various neighboring countries;
- Occurrence of natural or man-made disasters;
- Prevailing regional or global economic conditions, including in India's principal export markets; and
- Other significant regulatory or economic developments in or affecting India or its Distillation sector.

Any slowdown or perceived slowdown in the Indian economy, or in specific sectors of the Indian economy, could adversely impact our business, results of operations and financial condition and the price of the Equity Shares.

54. Changing laws, rules and regulations and legal uncertainties in India, including adverse application of tax laws and regulations, may adversely affect our business and financial performance.

Our business and financial performance could be adversely affected by changes in law or interpretations of existing, or the promulgation of new, laws, rules and regulations in India applicable to us and our business. For further details please refer to the chapter "***Government and Other Approvals***" on page 223 for details of the laws currently applicable to us. There can be no assurance that the central or the state governments in India may not implement new regulations and policies which will require us to obtain approvals and licenses from the central or the state governments in India and other regulatory bodies or impose onerous requirements and conditions on our operations. Any such changes and the related uncertainties with respect to the implementation of the new regulations may have a material adverse effect on all our business, financial condition and results of operations. In addition, we may have to incur capital expenditures to comply with the requirements of any new regulations, which may also materially harm our results of operations. For instance, the Government has proposed a comprehensive national goods and services tax ("***GST***") regime that will combine taxes and levies by the Central and state Governments into a unified rate structure. Given the limited availability of information in the public domain concerning the GST, we are unable to provide any assurance as to the tax regime following implementation of the GST. The implementation of this new structure may be affected by any disagreement between certain state Governments, which could create uncertainty. Any such future amendments may affect our overall tax efficiency, and may result in significant additional taxes becoming payable.

55. Communal disturbances, riots, terrorist attacks and other acts of violence or war involving India and/or other countries could adversely affect India's economy and the financial markets, result in loss of client confidence, and adversely affect our business, financial condition, cash flows and results of operations.

India has experienced communal disturbances, terrorist attacks and riots during recent years. Any major hostilities or other acts of violence, including civil unrest or similar events that are beyond our control, could have a material adverse effect on India's economy and our business and may adversely affect the Indian stock markets where our Equity Shares will trade as well as global equity markets generally. Such acts could negatively impact business sentiment and consumer confidence, which could adversely affect our business and profitability.

India and other countries may enter into armed conflict or war with other countries or extend preexisting hostilities. For example, neighboring countries in West and South Asia have experienced instances of civil unrest and hostilities. Military activity or terrorist attacks could adversely affect the Indian economy by, for example, disrupting communications and making travel more difficult.

Such events could also create a perception that investments in Indian companies involve a higher degree of risk. This could adversely affect client confidence in India, which could have a negative impact on the economies of India and other countries, on the markets for our products and services and on our business. Additionally, such events could have a material adverse effect on the market for securities of Indian companies, including the Equity Shares.

56. We may be affected by competition law in India and any adverse application or interpretation of the Competition Act could adversely affect our business.

The Competition Act was enacted for the purpose of preventing practices that have or are likely to have an adverse effect on competition in India and has mandated the CCI to separate such practices. Under the Competition Act, any arrangement, understanding or action, whether formal or informal, which causes or is likely to cause an appreciable adverse effect on competition is void and attracts substantial penalties.

Further, any agreement among competitors which directly or indirectly involves determination of purchase or sale prices, limits or controls production, distribution, shares the market by way of geographical area or number of subscribers in the relevant market is presumed to have an appreciable adverse effect in the relevant market in India and shall be void. The Competition Act also prohibits abuse of a dominant position by any enterprise. On March 4, 2011, the Government notified and brought into force the combination regulation (merger control) provisions under the Competition Act with effect from June 1, 2011. These provisions require acquisitions of shares, voting rights, assets or control or mergers or amalgamations that cross the prescribed asset and turnover based thresholds to be mandatorily notified to and pre-approved by the CCI. Additionally, on May 11, 2011, the CCI issued the Competition Commission of India (Procedure for Transaction of Business Relating to Combinations) Regulations, 2011 (as amended) which sets out the mechanism for implementation of the merger control regime in India.

57. The extent and reliability of Indian infrastructure could adversely affect our Company's results of operations and financial condition.

India's infrastructure is in developing phase compared to that of many developed nations. Any congestion or disruption in its port, rail and road networks, electricity grid, communication systems or any other public facility could disrupt our Company's normal business activity. Any deterioration of India's infrastructure would harm the national economy, disrupt the transportation of goods and supplies, and add costs to doing business in India. These problems could interrupt our Company's business operations, which could have an adverse effect on its results of operations and financial condition.

58. Terrorist attacks, civil unrest and other acts of violence or war involving India and other countries could adversely affect the financial markets and our business.

Terrorist attacks and other acts of violence or war may negatively affect the Indian markets on which our Equity Shares will trade and also adversely affect the worldwide financial markets. These acts may also result in a loss of business confidence, impede travel and other services and ultimately adversely affect our business. In addition, any deterioration in relations between India and Pakistan might result in investor concern about stability in the region, which could adversely affect the price of our Equity Shares. India has also witnessed civil disturbances in recent years and it is possible that future civil unrest as well as other adverse social, economic and political events in India could have a negative impact on the value of share prices generally as well as the price of our Equity Shares. Such incidents could also create a greater perception that investment in Indian companies involves a higher degree of risk and could have an adverse impact on our business and the price of our Equity Shares.

59. Public companies in India, including our Company, shall be required to prepare financial statements under Indian Accounting Standards.

India has decided to adopt the "Convergence of its existing standards with IFRS" and not the "International Financial Reporting Standards" ("IFRS"). These "IFRS based/synchronized Accounting Standards" are referred to in India as Ind AS. The Ministry of Corporate Affairs, Government of India, has through a notification dated February 16, 2015, set out the Ind AS and the timeliness for their implementation. Accordingly our Company is required to prepare their financial statements in accordance with Ind AS from April 1, 2016. Given that Ind AS is different in many respects from Indian GAAP under which our financial statements are currently prepared, our financial statements for the period commencing from April 1, 2016 may not be comparable to our historical financial statements. Further, we have made no attempt to quantify or identify the impact of the differences between Ind AS and Indian GAAP as applied to our financial statements and there can be no assurance that the adoption of Ind AS will not affect our

reported results of operations or financial condition. In addition, our management may also have to divert its time and other resources for the successful and timely implementation of Ind AS. Any failure to successfully adopt Ind AS may have an adverse effect on the trading price of the Equity Shares and/or may lead to regulatory action and other legal consequences. Moreover, our transition to Ind AS reporting may be hampered by increasing competition and increased costs for the relatively small number of Ind AS-experienced accounting personnel available as more Indian companies begin to prepare Ind AS financial statements. Any of these factors relating to the use of Ind AS may adversely affect our financial condition and results of operations.

60. Changing laws, rules and regulations and legal uncertainties, including adverse application of corporate and tax laws, may adversely affect our business, results of operations, financial condition and prospects.

The regulatory and policy environment in which we operate is evolving and subject to change. Such changes, including the instances mentioned below, may adversely affect our business, results of operations, financial condition and prospects, to the extent that we are unable to suitably respond to and comply with any such changes in applicable law and policy.

- The GoI has proposed a comprehensive national goods and services tax (—GSTI) regime that will combine taxes and levies by the Central and State Governments into a unified rate structure which is proposed to be effective from April 1, 2016. While the GoI and other state governments have announced that all committed incentives will be protected following the implementation of the GST, given the limited availability of information in the public domain concerning the GST, we are unable to provide any assurance as to this or any other aspect of the tax regime following implementation of the GST. The implementation of this rationalized tax structure may be affected by any disagreement between certain state governments, which may create uncertainty. Any such future increases or amendments may affect the overall tax efficiency of companies operating in India and may result in significant additional taxes becoming payable.
- Further, the General Anti Avoidance Rules (—GAAR) are proposed to be made effective from April 1, 2017. The tax consequences of the GAAR provisions being applied to an arrangement could result in denial of tax benefit amongst other consequences. In the absence of any precedents on the subject, the application of these provisions is uncertain. If the GAAR provisions are made applicable to our Company, it may have an adverse tax impact on us.

We have not determined the impact of these proposed legislations on our business. Uncertainty in the applicability, interpretation or implementation of any amendment to, or change in, governing law, regulation or policy in the jurisdictions in which we operate, including by reason of an absence, or a limited body, of administrative or judicial precedent may be time consuming as well as costly for us to resolve and may impact the viability of our current business or restrict our ability to grow our business in the future. Further, the GoI may introduce a waiver or incentive scheme in relation to specific population segments such as MSEs in public interest, pursuant to which we may be required to offer our products and services at discounted rates. This may affect our business and results of operations.

61. The occurrence of natural or man-made disasters could adversely affect our results of operations and financial condition.

The occurrence of natural disasters, including hurricanes, floods, earthquakes, tornadoes, fires, explosions, pandemic disease and man-made disasters, including acts of terrorism and military actions, could adversely affect our results of operations or financial condition, including in the following respects:

Catastrophic loss of life due to natural or man-made disasters could cause us to pay benefits at higher levels and/or materially earlier than anticipated and could lead to unexpected changes in persistency rates. A natural or man-made disaster could result in losses in our projects, or the failure of our counterparties to perform, or cause significant volatility in global financial markets.

Pandemic disease, caused by a virus such as the “Ebola” virus, H5N1, the “avian flu” virus, or H1N1, the “swine flu” virus “zika virus”, could have a severe adverse effect on our business. The potential impact of a pandemic on our results of operations and financial position is highly speculative, and would depend on numerous factors, including: the probability of the virus mutating to a form that can be passed from human to human; the rate of contagion if and when that occurs; the regions of the world most affected; the effectiveness of treatment of the infected population; the rates of mortality and morbidity among various segments of the insured versus the uninsured population; our insurance coverage and related exclusions; and many other variables.

62. Any downgrading of India’s debt rating by a domestic or international rating agency could have a negative impact on our business.

India’s sovereign debt rating could be downgraded due to various factors, including changes in tax or fiscal policy or a decline in India’s foreign exchange reserves, which are outside our control. Any adverse revisions to India’s credit ratings for domestic and international debt by domestic or international rating agencies may adversely impact our ability to raise additional financing, and the interest rates and other commercial terms at which such additional financing is available. This could have a material adverse effect on our business and financial performance, ability to obtain financing for capital expenditures and the price of our Equity Shares.

SECTION III – INTRODUCTION

SUMMARY OF OUR INDUSTRY

Global Economy Outlook

Global growth again fell short of expectations in 2015, slowing to 2.4 percent from 2.6 percent in 2014. The disappointing performance was mainly due to a continued deceleration of economic activity in emerging and developing economies amid weakening commodity prices, global trade, and capital flows. Going forward, global growth is projected to edge up, but at a slower pace than envisioned in the June 2015 forecast, reaching 2.9 percent in 2016 and 3.1 percent in 2017-18. The forecast is subject to substantial downside risks, including a sharper-than-expected slowdown in major emerging and developing economies or financial market turmoil arising from a sudden increase in borrowing costs that could combine with deteriorating fundamentals and lingering vulnerabilities in some countries. In developing countries, growth in 2015 is estimated at a post-crisis low of 4.3 percent, down from 4.9 percent in 2014 and 0.4 percentage point lower than projected in June (as per below figures). In a development unprecedented since the 1980s, most of the largest emerging economies in each region have been slowing simultaneously for three consecutive years. The economic rebalancing in China is continuing and accompanied by slowing growth. Brazil and Russia have been going through severe adjustments in the face of external and domestic challenges. On average, activity in emerging and developing commodity exporters stagnated in 2015, as they continued to be hard hit by declining commodity prices. As a result, the contribution to global growth from these economies has declined substantially. More generally, 2015 growth estimates for more than half of developing countries were further downgraded. Disappointments are concentrated in Latin America and, to a lesser degree, Sub-Saharan Africa, where a number of commodity exporters are struggling to maintain growth.

Notable exceptions in an otherwise gloomy outlook for developing countries include South Asia (reflecting reduced macroeconomic vulnerabilities and domestic policy reforms in India), as well as some commodity-importing countries in East Asia. Growth in low-income countries generally remained robust in 2015, albeit slowing to 5.1 percent from 6.1 percent in 2014. Some low-income economies showed continued strength (Ethiopia, Rwanda, Tanzania), supported by large scale infrastructure investment, ongoing mine development, and consumer spending. However, fiscal risks have increased in several countries in East Africa because of sharp increases in public debt and contingent liabilities.

These scattered bright spots aside, the widespread slowdown across emerging and developing economies is a source of concern for the global economy and poses a threat to hard-won achievements in poverty reduction: more than 40 percent of the world's poor live in the developing countries where growth slowed in 2015.

Worsening prospects for developing countries have coincided with a sharp slowdown in global trade, a rise in financial market volatility, and a substantial decrease in capital inflows (Figure 1.2). In anticipation of tighter U.S. monetary policy, currency pressures have intensified and borrowing costs have increased, particularly for a number of commodity exporters. Significant nominal currency depreciations against the U.S. dollar are straining balance sheets in countries with elevated dollar-denominated liabilities. In an environment of weak global trade, exports are likely to languish. On the domestic front, a trend deceleration in productivity growth, rising private sector leverage, depleted fiscal buffers, and heightened policy uncertainty are major headwinds.

In contrast to developing countries, the recovery in major high-income countries gained traction in 2015 and has been increasingly driven by stronger domestic demand as labor markets heal and credit conditions improve. However, 2016 growth forecasts for high-income countries have been marked down in light of the effect on the United States of dollar appreciation and the impact on Japan of slowing trade in Asia. Conditions for a continued but fragile upturn in the Euro Area still appear in place, despite soft external demand and rising geopolitical concerns. Albeit gradually dissipating, legacies from the global financial crisis continue to be felt across high-income countries, limiting both aggregate demand and the underlying growth potential of these economies.

Going forward, global growth should pick up, albeit at an appreciably slower pace than previously projected, reaching 2.9 percent in 2016 and 3.1 percent in 2017-18. Global inflation is expected to increase moderately in 2016 as commodity prices level off, but will remain low by historical standards. A modest upturn in global activity in 2016 and beyond is predicated on a continued recovery in major high-income countries, a gradual slowdown and rebalancing in China, a stabilization of commodity prices, and an increase in global interest rates that is gradual and stays well contained. All of these projections, however, are subject to substantial downside risks.

Indian Economy Overview

As per the Advance Estimates released by the Central Statistics Office (CSO), the growth rate of the gross domestic product (GDP) at constant market prices has been estimated at 7.6 per cent in 2015-16, which is higher than the growth of 7.2 percent growth recorded in the previous year. The growth of the gross value added (GVA) at constant basic prices has been estimated at 7.3 per cent in 2015-16 —as opposed to 7.1 per cent in 2014-15—, with agriculture and allied sectors, industrial sector and services sector growing at 1.1 per cent, 7.3 per cent and 9.2 per cent respectively. The growth of GDP at constant basic prices for the first, second and third quarters of 2015-16 has been estimated at 7.6 per cent, 7.7 per cent and 7.3 per cent respectively.

On the demand side, the growth in final consumption expenditure at constant (2011-12) prices is estimated to have remained strong at 6.9 per cent in 2015- 16, as compared to 7.2 per cent in 2014-15. The growth in gross fixed capital formation at constant prices increased from 4.9 per cent in 2014-15 to 5.3 per cent in 2015-16. Exports and imports of goods and non-factor services declined (at constant prices) by 6.3 per cent each in 2015-16; the former mainly on account of the sluggishness in the global economy and the latter on account of decline in international petroleum and other commodity prices

Distillery Industry

The use of alcohol as a drink is an age-old story in India and it appears that the technique for fermentation and distillation was available even in the Vedic times. It was then called “Somarasa” and was used not only for its invigorating effect but also in worship and medicinal uses. To date, not only has the consumption of alcohol been continued but it is an integral part of the Ayurvedic system of medicine.

The distillery industry today consists broadly of two parts, one potable liquor and the industrial alcohol including anhydrous ethanol for blending with petrol. The potable industry producing Indian Made Foreign Liquor and Country Liquor has a steady but limited demand with a growth rate of about 7-10 per cent per annum. The industrial alcohol industry on the other hand, is showing a declining trend because of high price of Molasses which is invariably used as a substrate for production of alcohol. The alcohol produced is now being utilized in the ratio of approximately 52 per cent for potable and the balance 48 percent for industrial and ethanol for blending with petrol, use. Over the years the potable liquor industry has shown remarkable results in the production of high quality spirits. Indian Liquor industry is today exporting a sizable quantity of Indian Liquor products to other countries.

The utilization of Ethyl alcohol or Ethanol, now popularly known as alcohol, for industrial use is a recent phenomenon and its importance came into being towards the end of the second world war. With protection being granted to the sugar Industry in 1932, a large number of sugar factories were established in the country, particularly in Maharashtra and Uttar Pradesh where irrigation facilities existed for cultivation of sugarcane. This increase resulted in accumulation of molasses, which resultantly, caused unmanageable environmental problems. At that time the demand for molasses was almost insignificant and the sugar mills had to incur some expenditure on removal of this bye product i.e. molasses. For resolving these problems a joint committee of U.P. and Bihar was constituted to explore the possibilities of developing alcohol based industries for the purpose of utilization of molasses. The Committee in its report recommended the establishment of distilleries for production of alcohol, utilizing molasses as substrate.

It also recommended that alcohol produced by the distilleries should be admixed with petrol, to supplement motor fuel. The production of alcohol did not only help in solving the problems of disposal of molasses but it also filled up the gap in the demand and supply of motor spirit. As a substantial quantity of alcohol after meeting its requirement for manufacture of gasohol alcohol was diverted for production of alcohol based chemicals in different parts of the country. The utilization of alcohol for this purpose progressed steadily and a substantial quantity of alcohol produced in the country is now being utilized for manufacture of solvents and intermediates. Till a few years back a little more than 50% alcohol produced in the country was being utilized for production of alcohol based chemicals but after the decontrol of molasses in the year 1993 the utilization of alcohol for production of chemicals, dye-stuff, synthetic rubber, polymers and plastics etc. has received a setback.

However, with the advent of ethanol blending with petrol/ motor fuel, the requirement of ethanol/ industrial alcohol has increased manifold in the country to the extent that in case 5-10 % blending, if made mandatory all over the country, the sugar factory molasses available in the country shall not prove to be adequate for meeting the total requirement of ethanol including its use for potable liquors and other industrial uses. The alcohol industry has a total installed capacity of 4200 million litres of alcohol in a year. However, the licenced capacity is concentrated in three states of U.P., Maharashtra and Tamilnadu . With the announcement of the Government of India to make blending of motor fuel with ethanol upto 5 % mandatory and to raise it to 10% by the year 2017-

18, a substantial increase in the requirement as well as production capacity of ethanol is expected and a large number of ethanol distilleries are on the anvil of installation.

The ethanol is being mixed with petrol upto 20% to 25 % in Brazil and nearly 30 -40 % in USA particularly in the state of California. India therefore has to immediately look for other sources of feedstock for production of ethanol for increasing the total production and meeting the requirement of ethanol even for 5-10% blending with petrol, coupled with further increasing the availability of molasses through increase in sugar cane production and sugar mills capacity. Thus the distillery industry is destined to play a very important and vital role in the nation's economic and industrial scenario in the near future.

OVERVIEW

We believe that we are one of the leading manufacturers of Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol. Apportion of our production of molasses from sugar factory is used as raw material for manufacture of spirit i.e. Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol which is manufactured by the Continuous Fermentation & Multipressure Vacuum Distillation and also effecting sells of carbon dioxide (CO₂) and fusel oil which are produced as by-products during distillation process of Spirit. Our Products are manufactured at our distillery situated at Walchandnagar, Maharashtra with total area of approx 40 Acres which is a molasses based distillery. Our majority of the spirit which contains 95% alcohol by nature and also used to manufacture alcohol by the process of rectification is used by chemical and pharmaceutical industries.

Our Company was originally incorporated on August 03, 2000 as private limited company under the name and style of “Aurangabad Distillery Private Limited” with Registrar of Company, Maharashtra by Original Promoters, Mr. Manoj Wadhvani, Mrs. Kiran Wadhvani and Mr. Sadharam Wadhvani with a main object to set up an distillery and manufacturing of spirits. In the year 2005, our company purchased a distillery with land and installed Plant & machinery situated at Walchandnagar from Ashok Alcochem Limited. Later in the year 2005, the company was taken over by Present promoters Mr. Amardeepsingh Triloksingh Sethi, Mr. Dharampal Kimatram Kalani, Mr. Kanyalal Kimatram Kalani and Mrs. Jagjitkaur Amardeepsingh Sethi. During the last quarter of the year 2005, our company has started its commercial production of spirit with new management.

The manufacturing process of Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol is based on the modern technology of Continuous Fermentation and multi pressure vacuum distillation and molasses from sugar factory is used as raw material for manufacture of Spirit. The Rectified Spirit is the initial product obtained. It is diluted with soft water and further distilled to remove any organic impurities & refined to obtain best quality denatured spirit and extra neutral alcohol. Our Company also sells carbon dioxide (CO₂) and fusel oil which are produced as by-products during distillation process of Spirit. Additionally our company produces electricity through turbine which is captively consumed in our distillation process and reduces the dependency on purchased electricity.

Features of our Products:-

- Molasses based Spirit
- Cleared & colorless
- Homogeneous liquid
- Miscible with water
- Non toxic
- High transparency

Global Economy Outlook

Global growth again fell short of expectations in 2015, slowing to 2.4 percent from 2.6 percent in 2014. The disappointing performance was mainly due to a continued deceleration of economic activity in emerging and developing economies amid weakening commodity prices, global trade, and capital flows. Going forward, global growth is projected to edge up, but at a slower pace than envisioned in the June 2015 forecast, reaching 2.9 percent in 2016 and 3.1 percent in 2017-18. The forecast is subject to substantial downside risks, including a sharper-than-expected slowdown in major emerging and developing economies or financial market turmoil arising from a sudden increase in borrowing costs that could combine with deteriorating fundamentals and lingering vulnerabilities in some countries.

In developing countries, growth in 2015 is estimated at a post-crisis low of 4.3 percent, down from 4.9 percent in 2014 and 0.4 percentage point lower than projected in June (as per below figures). In a development unprecedented since the 1980s, most of the largest emerging economies in each region have been slowing simultaneously for three consecutive years. The economic rebalancing in China is continuing and accompanied by slowing growth. Brazil and Russia have been going through severe adjustments in the face of external and domestic challenges. On average, activity in emerging and developing commodity exporters stagnated in 2015, as they continued to be hard hit by declining commodity prices. As a result, the contribution to global growth from these economies has declined substantially. More generally, 2015 growth estimates for more than half of developing countries were further downgraded. Disappointments are concentrated in Latin America and, to a lesser degree, Sub-Saharan Africa, where a number of commodity exporters are struggling to maintain growth.

Notable exceptions in an otherwise gloomy outlook for developing countries include South Asia (reflecting reduced macroeconomic vulnerabilities and domestic policy reforms in India), as well as some commodity-importing countries in East Asia. Growth in low-income countries generally remained robust in 2015, albeit slowing to 5.1 percent from 6.1 percent in 2014. Some low-income economies showed continued strength (Ethiopia, Rwanda, Tanzania), supported by large scale infrastructure investment, ongoing mine development, and consumer spending. However, fiscal risks have increased in several countries in East Africa because of sharp increases in public debt and contingent liabilities.

These scattered bright spots aside, the widespread slowdown across emerging and developing economies is a source of concern for the global economy and poses a threat to hard-won achievements in poverty reduction: more than 40 percent of the world's poor live in the developing countries where growth slowed in 2015.

Worsening prospects for developing countries have coincided with a sharp slowdown in global trade, a rise in financial market volatility, and a substantial decrease in capital inflows (Figure 1.2). In anticipation of tighter U.S. monetary policy, currency pressures have intensified and borrowing costs have increased, particularly for a number of commodity exporters. Significant nominal currency depreciations against the U.S. dollar are straining balance sheets in countries with elevated dollar-denominated liabilities. In an environment of weak global trade, exports are likely to languish. On the domestic front, a trend deceleration in productivity growth, rising private sector leverage, depleted fiscal buffers, and heightened policy uncertainty are major headwinds.

In contrast to developing countries, the recovery in major high-income countries gained traction in 2015 and has been increasingly driven by stronger domestic demand as labor markets heal and credit conditions improve. However, 2016 growth forecasts for

high-income countries have been marked down in light of the effect on the United States of dollar appreciation and the impact on Japan of slowing trade in Asia. Conditions for a continued but fragile upturn in the Euro Area still appear in place, despite soft external demand and rising geopolitical concerns. Albeit gradually dissipating, legacies from the global financial crisis continue to be felt across high-income countries, limiting both aggregate demand and the underlying growth potential of these economies.

Going forward, global growth should pick up, albeit at an appreciably slower pace than previously projected, reaching 2.9 percent in 2016 and 3.1 percent in 2017-18. Global inflation is expected to increase moderately in 2016 as commodity prices level off, but will remain low by historical standards. A modest upturn in global activity in 2016 and beyond is predicated on a continued recovery in major high-income countries, a gradual slowdown and rebalancing in China, a stabilization of commodity prices, and an increase in global interest rates that is gradual and stays well contained. All of these projections, however, are subject to substantial downside risks.

Global and developing-country growth prospects:-

A. GDP growth, actual and projected

B. Global GDP growth forecasts over time

C. Contribution to global growth revisions

D. Contribution to global growth

E. Share of developing countries with slower growth than 1990-2008 average

F. Share of world's poor living in countries with slowing growth

A. Shaded areas indicate forecasts.

B. Global GDP growth forecasts for a given year over subsequent Global Economic Prospects projection exercises.

C. Contribution to global growth revisions measured in constant 2010 U.S. dollars. "Other Com. Exp." stands for other commodity exporters, and excludes Russia and Brazil; "Other Com. Imp." stands for other commodity importers, and excludes China and G3 (Euro Area, Japan, and United States). Cumulative contributions from individual country growth revisions can differ from global growth revisions reported in Table 1.1 due to decimal rounding.

D. Contributions to global growth measured in constant 2010 U.S. dollars. "Other Com. Exp." stands for other commodity exporters, and excludes Russia, Brazil and South Africa; "Other Com. Imp." stands for other commodity importers, and excludes China, India and G3 (Euro Area, Japan, and United States).

E. For each year, the fraction of middle- and low-income countries in which growth is slower than its historical average for 1990-2008.

F. Share of extreme poor (\$1.90/day) living in developing countries that grew more slowly in the current year than in the previous year. EAP= East Asia and Pacific, ECA = Europe and Central Asia, LAC = Latin America and the Caribbean, MNA = Middle East and North Africa, SAR = South Asia, SSA = Sub-Saharan Africa.

Although it is still a low-probability scenario, a faster-than-expected slowdown in China combined with a more protracted deceleration in other large emerging markets is a risk. Empirical estimates suggest that a sustained 1 percentage point decline in growth in the BRICS (Brazil, the Russian Federation, India, China, and South Africa) would reduce growth in other emerging and developing economies by around 0.8 percentage point and global growth by 0.4 percentage point. This suggests a substantial risk of contagion through other emerging markets, with potential adverse effects for some advanced economies as well. Compounding this risk is the possibility of a protracted decline in potential growth throughout emerging and developing economies, persistently subdued growth in major high-income countries, and an escalation of geopolitical tensions. In addition, baseline forecasts of a smooth monetary policy tightening cycle in the United States are subject to considerable uncertainty. A sudden readjustment of expectations about the future trajectory of U.S. interest rates could combine with domestic fragilities and policy uncertainties in some developing countries to generate financial stress. Given the weak outlook and lingering vulnerabilities in many developing countries, these risks have the potential to be a source of damaging sudden stops in capital flows in the most fragile economies.

Policies can play an important role in mitigating risks and supporting growth. A combination of cyclical and structural policies could be mutually reinforcing. In the near term, policy actions need to be focused on building the ability to withstand financial market turbulence. Cyclical policies need to be supplemented with structural reform measures that boost investors' confidence in the short term and enhance growth prospects in the long term.

Indian Economy Overview

As per the Advance Estimates released by the Central Statistics Office (CSO), the growth rate of the gross domestic product (GDP) at constant market prices has been estimated at 7.6 per cent in 2015-16, which is higher than the growth of 7.2 percent growth recorded in the previous year. The growth of the gross value added (GVA) at constant basic prices has been estimated at 7.3 per cent in 2015-16 —as opposed to 7.1 per cent in 2014-15—, with agriculture and allied sectors, industrial sector and services sector growing at 1.1 per cent, 7.3 per cent and 9.2 per cent respectively. The growth of GDP at constant basic prices for the first, second and third quarters of 2015-16 has been estimated at 7.6 per cent, 7.7 per cent and 7.3 per cent respectively.

On the demand side, the growth in final consumption expenditure at constant (2011-12) prices is estimated to have remained strong at 6.9 per cent in 2015-16, as compared to 7.2 per cent in 2014-15. The growth in gross fixed capital formation at constant prices increased from 4.9 per cent in 2014-15 to 5.3 per cent in 2015-16. Exports and imports of goods and non-factor services declined (at constant prices) by 6.3 per cent each in 2015-16; the former mainly on account of the sluggishness in the global economy and the latter on account of decline in international petroleum and other commodity prices

As per the Economic Survey, India will seek to adhere to medium-term fiscal deficit target of 3 per cent of the country's gross domestic product (GDP). A three-pronged strategy of promoting competition, investing in health and education while not neglecting agriculture will help India to achieve its long-term potential growth rate of around 8-10 per cent, said the survey.

Fiscal Deficit:

- Fiscal deficit target of 3.5 per cent of GDP pegged for 2016-17
- Fiscal deficit of 3.9 per cent 2015-16 of GDP seems achievable
- India must adhere to medium-term fiscal deficit target of 3 per cent of GDP
- Achieving fiscal target for 2016-17 seems challenging on account of additional outgo towards Seventh Pay Commission (SPC) and a slowing global economy
- Fundamental task of the budget should be to preserve fiscal sustainability

GDP Growth:

- GDP growth expected to accelerate between 7 and 7.5 per cent in 2016-17
- Real GDP growth at 7.6 per cent in 2015-16
- Gross Value Added (GVA) growth at basic prices 7.3 per cent in 2015-16
- Long term potential GDP growth of eight to ten per cent is estimated

Inflation and monetary policy:

- Average retail inflation, measured by Consumer Price Index (CPI), in 2015-16 (April – December) seen at 4.5- 5 per cent
- Average Wholesale Price Index (WPI) inflation, in 2015-16 (April – December) seen at -3 per cent from 2 per cent in 2014-15
- Reserve Bank of India (RBI) expected to meet 5 per cent inflation target by March 2017
- With the easing of inflationary conditions, RBI cut the repo rate by 50 basis points to 6.75 per cent in September 2015
- Prospect of lower oil prices over medium term likely to dampen inflationary expectations

External Sector:

- During April-January 2015, India's exports declined by 17.6 per cent year-on-year and reached US\$ 217.7 billion due to sluggish global demand and low global commodity prices
- During April-January 2015, imports also declined by 15.5 per cent year-on-year to US\$ 324.5 billion
- In 2016-17, Current Account Deficit (CAD) is expected to be at 1-1.5 per cent of GDP
- Export growth negative due to weak global scenario
- To counter increased trade deficit, the government announced several initiatives aimed at boosting India's exports

Performance of key sectors:

- Agriculture and food management:
- Agriculture and allied activities remain the major source of livelihood for nearly half of the Indian population. The share of agriculture in employment was 48.9 per cent of the workforce and its share in the Gross Domestic Product (GDP) was 17.4 per cent in 2014-15.
- India has emerged as a significant agricultural exporter of commodities such as cotton, rice, meat, oil meals, spice, guar gum meal and sugar. As per the World Trade Organisation's (WTO's) Trade Statistics, the share of India's agricultural exports and imports in the world trade in 2014 were 2.46 per cent and 1.46 per cent respectively.
- Agricultural exports as a percentage of agricultural GDP increased from 7.95 per cent in 2009-10 to 12.08 per cent in 2014-15.
- Food grain production for 2015-16 is estimated at 253.16 million tonnes (MT); higher by 1.14 MT over the production of 252.02 MT during 2014-15.

Key Government initiatives to boost economic growth:

- Government is looking to facilitate a host of initiatives, including the new bankruptcy law, rehabilitation of stalled projects, proposed changes to the Prevention of Corruption Act as well as the broader JAM (Jan Dhan, Aadhaar and Mobile governance) agenda
- Diesel prices have been de-regulated
- Increase in wages recommended by the Seventh Pay Commission
- Cooking gas subsidy has been replaced by direct transfer
- Several initiatives taken which to transform the infrastructure sector
- Reforms to be implemented to fertilizer subsidy
- Standard deduction and exemptions to be phased out in an orderly manner in due course
- Higher property tax rates may be implemented
- Reasonable taxation from rich agriculturalists
- More emphasis to be given on widening the tax base

Distillery Industry

The use of alcohol as a drink is an age-old story in India and it appears that the technique for fermentation and distillation was available even in the Vedic times. It was then called "Somarasa" and was used not only for its invigorating effect but also in worship and medicinal uses. To date, not only has the consumption of alcohol been continued but it is an integral part of the Ayurvedic system of medicine.

The distillery industry today consists broadly of two parts, one potable liquor and the industrial alcohol including anhydrous ethanol for blending with petrol. The potable industry producing Indian Made Foreign Liquor and Country Liquor has a steady but limited demand with a growth rate of about 7-10 per cent per annum. The industrial alcohol industry on the other hand, is showing a declining trend because of high price of Molasses which is invariably used as a substrate for production of alcohol. The alcohol produced is now being utilized in the ratio of approximately 52 per cent for potable and the balance 48 percent for industrial and ethanol for blending with petrol, use. Over the years the potable liquor industry has shown remarkable results in the production of high quality spirits. Indian Liquor industry is today exporting a sizable quantity of Indian Liquor products to other countries.

The utilization of Ethyl alcohol or Ethanol, now popularly known as alcohol, for industrial use is a recent phenomenon and its importance came into being towards the end of the second world war. With protection being granted to the sugar Industry in 1932, a large number of sugar factories were established in the country, particularly in Maharashtra and Uttar Pradesh where irrigation facilities existed for cultivation of sugarcane. This increase resulted in accumulation of molasses, which resultantly, caused unmanageable environmental problems. At that time the demand for molasses was almost insignificant and the sugar mills had to incur some expenditure on removal of this bye product i.e. molasses. For resolving these problems a joint committee of U.P. and Bihar was constituted to explore the possibilities of developing alcohol based industries for the purpose of utilization of molasses.

The Committee in its report recommended the establishment of distilleries for production of alcohol, utilizing molasses as substrate.

It also recommended that alcohol produced by the distilleries should be admixed with petrol, to supplement motor fuel. The production of alcohol did not only help in solving the problems of disposal of molasses but it also filled up the gap in the demand and supply of motor spirit. As a substantial quantity of alcohol after meeting its requirement for manufacture of gasohol alcohol was diverted for production of alcohol based chemicals in different parts of the country. The utilization of alcohol for this purpose progressed steadily and a substantial quantity of alcohol produced in the country is now being utilized for manufacture of solvents and intermediates. Till a few years back a little more than 50% alcohol produced in the country was being utilized for production of alcohol based chemicals but after the decontrol of molasses in the year 1993 the utilization of alcohol for production of chemicals, dye-stuff, synthetic rubber, polymers and plastics etc. has received a setback.

However, with the advent of ethanol blending with petrol/ motor fuel, the requirement of ethanol/ industrial alcohol has increased manifold in the country to the extent that in case 5-10 % blending, if made mandatory all over the country, the sugar factory molasses available in the country shall not prove to be adequate for meeting the total requirement of ethanol including its use for potable liquors and other industrial uses. The alcohol industry has a total installed capacity of 4200 million litres of alcohol in a year. However, the licenced capacity is concentrated in three states of U.P., Maharashtra and Tamilnadu . With the announcement of the Government of India to make blending of motor fuel with ethanol upto 5 % mandatory and to raise it to 10% by the year 2017-18, a substantial increase in the requirement as well as production capacity of ethanol is expected and a large number of ethanol distilleries are on the anvil of installation.

The ethanol is being mixed with petrol upto 20% to 25 % in Brazil and nearly 30 -40 % in USA particularly in the state of California. India therefore has to immediately look for other sources of feedstock for production of ethanol for increasing the total production and meeting the requirement of ethanol even for 5-10% blending with petrol, coupled with further increasing the availability of molasses through increase in sugar cane production and sugar mills capacity. Thus the distillery industry is destined to play a very important and vital role in the nation's economic and industrial scenario in the near future.

Liquor Market in India

India has the world's third largest and fastest growing market for alcoholic beverages. The whiskey market—estimated at 300 million cases—is the largest in the world. The World Health Organization (WHO) reports that liquor consumption in India has been growing steadily since 2005. In the meantime, per capita consumption of alcohol beverages has increased from 3.6 litres to 4.3 litres between 2003 and 2010, 93 per cent of this growth comes from liquor (spirits). While tariffs on imported liquor remain high, domestic liquor manufacturing and sales are also enmeshed in a complicated network of laws and regulations on both the federal and state levels.

Indian Made Foreign Liquor (IMFL): Hard liquor that has incorporated imported raw material or borrowed the concept from foreign branded liquor are often termed as Indian Made Foreign Liquor (IMFL).v Among all IMFL, whiskey accounts for approximately 46 percent of total sales. Despite its origins, freedom to buy IMFL is restricted in some federal states. The southern states are often more heavily regulated in liquor manufacturing and distribution than the north. They are often available at retail outlets and privately owned bars. A licensing system is used by the federal states to control the number of private bars. Nevertheless, purchase of IMFL in southern Indian states including Kerala, Tamil Nadu, Karnataka and Andhra Pradesh still accounts for more than 60 per cent of total annual sale in the country.

Imported Foreign Liquor (IFL): IFL includes foreign produced liquor imported to India. IFL constitutes only a marginal share of the total alcohol consumption in India. Consumers of IFL are often rich and upper middle class people or international travellers. Duties on IFL are as high as 150 percent, a reason why its share of India's total liquor market is less than 3 percent. Despite the high custom duties on IFL and strict quotas on the amount of liquor travellers can carry into the country, whiskey imported has grown steadily over the years primarily driven by purchases from government, licensed retailers and manufacturers using IFL as raw materials for their own products.

Country Liquor: Country Liquor, also called Indian Made Indian Liquor or (IMIL), is brewed and mostly sold domestically. Most of the country liquor is sold in northern states. Ethanol from molasses and grains are used in the north while palm and coconut are

used in the south for producing the country liquor. The price of country liquor is much cheaper compared to IMFL and IFL; the reason it constitutes 48 per cent of the domestic liquor market.

Ethanol Industry

After a banner year in 2014, the U.S. ethanol industry faced a host of familiar challenges in 2015. Low oil prices led to challenging production economics. Regulatory indecision caused uncertainty in the marketplace. And, ethanol opponents ramped up their campaign against the Renewable Fuel Standard (RFS). But the ethanol industry again showed its strength and resolve in 2015. Booming export demand and ethanol’s indispensable value as a clean, low-cost octane booster helped producers weather the storm. In fact, ethanol biorefineries in 29 states produced a record 14.7 billion gallons of high-octane renewable fuel and some 40 million metric tons of high-protein animal feed. Domestic ethanol blending also hit a new record, as lower oil prices led to an eight-year high in gasoline consumption. The third-largest corn crop in history also was a bright spot. Meanwhile, the White House and Environmental Protection Agency (EPA) dealt a blow to ethanol producers, farmers, and consumers when they finalized RFS volume requirements for 2014-2016 that were below the levels mandated by Congress.

In the end, while OPEC’s strategy to snuff out competition was successful in bringing the U.S. fracking boom to a halt, it certainly didn’t deter America’s ethanol producers from reaching new heights. And while the administration’s mismanagement of the RFS continued to create uncertainty, it didn’t stop the ethanol industry from innovating and adopting new technologies. As 2016 began, America’s ethanol producers remained ready for whatever challenges might arise in the New Year, and poised to seize upon any new opportunities to expand production and use of homegrown renewable fuel.

While the 2015 crash in oil prices led to thousands of layoffs in the petroleum sector and economic challenges for many communities, growth in the ethanol sector continued to serve as a crucial wealth generator for rural areas across the nation. The ethanol industry is responsible for creating well paying, stable jobs in areas where such employment is often hard to come by. In 2015, the production of 14.7 billion gallons of ethanol supported 85,967 direct jobs in renewable fuel production and agriculture, as well as 271,440 indirect and induced jobs across all sectors of the economy. Not surprisingly, five of the top 10 states with the lowest unemployment rates also rank in the top 10 ethanol-producing states.

The industry added \$44 billion to the nation’s Gross Domestic Product (GDP) in 2015 and paid \$10 billion in taxes. The sector’s economic activity and job creation helped raise household income by \$24 billion. Meanwhile, the U.S. ethanol industry spent \$25 million on raw materials, other inputs, and other goods and services. But more importantly, ethanol industry workers take great pride in what they do. A recent survey by Ethanol Producer Magazine found that more than 90% of ethanol employees are “satisfied” with their jobs, with 66% being “very” or “extremely satisfied.” Amongst the reasons for their job satisfaction, “job security” ranked highest, with “competitive salaries” and “positive work environment” following closely behind.

Ethanol Exports and Imports

The export market continued to serve as a crucial source of demand for U.S. ethanol in 2015, with approximately 850 million gallons shipped to more than 50 countries. In 2015, both total exports and net exports were on par with 2014 levels. A number of new trading partners entered the fray in 2015, and China's rapid emergence as a Top 10 destination for U.S. ethanol was a major development. Canada remained as the U.S. ethanol industry's top export customer, receiving approximately 30% of all shipments. Brazil, the Philippines, South Korea, and India were other familiar top destinations. While U.S. ethanol exports continued to surge, ethanol imports continued to sag. Fuel ethanol imports registered less than 100 million gallons for the second straight year, despite the demand pull from California's Low Carbon Fuel Standard and the RFS advanced biofuel standard. With much lower crude oil prices in 2015, many predicted that demand for U.S. ethanol exports would falter. However, robust export volumes in 2015 demonstrate that gasoline blenders in foreign markets are increasingly valuing ethanol for its unique octane and oxygenate properties. Just as U.S. refiners and blenders have optimized their operations to take advantage of ethanol as a low-cost octane source, so too are international gasoline producers.

In this section, a reference to the “Company” or “we”, “us” or “our” means Aurangabad Distillery Limited.

All financial information included herein is based on our “Financial information of the Company” included on page 160 of this Draft Prospectus.

OVERVIEW

We believe that we are one of the leading manufacturers of Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol. Apportion of our production of molasses from sugar factory is used as raw material for manufacture of spirit i.e. Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol which is manufactured by the Continuous Fermentation & Multipressure Vacuum Distillation and also effecting sells of carbon dioxide (CO₂) and fusel oil which are produced as by-products during distillation process of Spirit. Our Products are manufactured at our distillery situated at Walchandnagar, Maharashtra with total area of approx 40 Acres which is a molasses based distillery. Our majority of the spirit which contains 95% alcohol by nature and also used to manufacture alcohol by the process of rectification is used by chemical and pharmaceutical industries.

Our Company was originally incorporated on August 03, 2000 as private limited company under the name and style of “Aurangabad Distillery Private Limited” with Registrar of Company, Maharashtra by Original Promoters, Mr. Manoj Wadhvani, Mrs. Kiran Wadhvani and Mr. Sadhuram Wadhvani with a main object to set up an distillery and manufacturing of spirits. In the year 2005, our company purchased a distillery with land and installed Plant & machinery situated at Walchandnagar from Ashok Alcochem Limited. Later in the year 2005, the company was taken over by Present promoters Mr. Amardeepsingh Triloksingh Sethi, Mr. Dharampal Kimatram Kalani, Mr. Kanyalal Kimatram Kalani and Mrs. Jagjitkaur Amardeepsingh Sethi. During the last quarter of the year 2005, our company has started its commercial production of spirit with new management.

The manufacturing process of Rectified Spirit, Denatured Spirit and Extra Neutral Alcohol is based on the modern technology of Continuous Fermentation and multi pressure vacuum distillation and molasses from sugar factory is used as raw material for manufacture of Spirit. The Rectified Spirit is the initial product obtained. It is diluted with soft water and further distilled to remove any organic impurities & refined to obtain best quality denatured spirit and extra neutral alcohol. Our Company also sells carbon dioxide (CO₂) and fusel oil which are produced as by-products during distillation process of Spirit. Additionally our company produces electricity through turbine which is captively consumed in our distillation process and reduces the dependency on purchased electricity.

Our Company has set up its Effluent Treatment Plant (ETP) which is used to treat the waste generated during the process of distillation. The spent wash generated from Distillation is highly polluted in nature, as it is acidic in content. For effective control of pollution, Effluent Treatment Plant comprises of Primary treatment plant and Secondary treatment plant which together treat the waste with conversion into solid form and afterwards the waste is degraded using the Press mud.

In order to strengthen our business operation and continue to invest in technology, our Company has shifted from manual distillation to automated distillation in the year 2015-16. The distillation plant consists of analyser column and rectifier column. The analyser column built along with degasifying column and each column is attached with condensers. The fermented wash pumped from the clarified wash tank is fed into an analyser column on continuous basis and steam is injected for separating alcohol and spent wash from fermented wash in analyser column. All the activities are controlled by Programmable Logic Controller (PLC) which overcomes the limitation of manual distillation. Our Distillation plants are customized for quality, consumption and operational ease. We have state of the art specially designed equipment’s enabling efficient separation of impurities with reduced scaling and down time. Below are the features of our automated distillation Plant:-

- Multi pressure distillation operates under vacuum and at low operating temperatures which avoids hard scale formation.

- Reduction in impurities in spirit production
- Reduction in effluent quality by integrating by the evaporation system

Our Promoters are actively involved in our operations and bring to our Company their vision and leadership which we believe has been instrumental in sustaining our business operations. Our Company feels that the strength of any successful organization lies in the experience and guidance of its team leaders and staff alike.

3. Quality Assurance and Standards:

We believe in providing our customers the best possible quality by manufacturing and removing impurities from Spirit. Quality standards followed right from the beginning were very stringent, and adhere during the distillation process of spirit. We are very particular from usage of right quality of molasses to following the right procedure for fermentation. Our dedicated efforts towards the quality of products, processes and inputs have helped us gain a competitive advantage over others. There are quality checks in place that prevent any defective material from reaching the customer. We believe that our quality products have earned us a goodwill from our customers, which has resulted in repeat orders from many of them.

Our existing manufacturing facility is established in the state of Maharashtra, Walchandnagar with total area of approx 40 Acres of land with sufficient plant & machinery installed thereat. Our factory is fully equipped automatically operated distillery with fermentation tanks, analyzer column, rectifier column, simmering column and Programmable Logic Controller. The Distillery unit has processing plant for manufacturing rectified spirit and Denatured spirit and further conversion of rectified spirit to Extra Neutral alcohol. Additionally our factory has Effluent treatment plant (ETP) for degradation of waste and CO₂ plant which is generated during the process of distillation. The established manufacturing plant adds significant competitive advantage in distillation process of our Company.

5. Existing relationship with suppliers:-

We manufacture rectified spirit, Denatured Spirit and Extra neutral Alcohol for Alcohol, Chemicals and Pharmaceuticals manufacturing Companies. We acquire raw materials, basically molasses, from several suppliers and have enduring relationship with them for a long time. We believe that our strong relationships with suppliers will enable us to continue to grow our business. Due to our relationships with our suppliers, we get quality and timely supplies of raw materials. This enables us to manage our inventories and supply quality products on timely basis to our customers. This in turn has enabled us to generate repeat business.

OUR BUSINESS STRATEGIES:-

1. Improve capacity utilization and increase operational efficiencies:-

We are focused on further integrating our operations and improving capacity utilization at our production facilities and optimize product planning across product categories. Higher capacity utilization results in greater production volumes and higher sales, and therefore allows us to spread fixed costs over higher sales, thereby increasing profit margins. We also continue to identify various strategic initiatives to improve our operational efficiencies and reduce operating costs. For example, we have set up a captive co-generation power facility to simultaneously produce electric power from turbine along with steam required for manufacturing process, from the same fuel, thereby reducing costs of fuel and power. We continue to adopt best practices and standards across our production facilities, drawing on our management's expertise and experience in distillation. We continue to target economies of scale to gain increased negotiating power on procurement and to realize cost savings through centralized deployment and management of production, maintenance, accounting and other support functions.

2. To build-up a professional organization:-

As an organization we believe in transparency and commitment in our work among our work force and with our suppliers, customers, government authorities, banks, financial institutions etc. We have employed experienced persons for taking care of our day to day activities. We also consult with outside agencies on a case to case basis on technical and financial aspects of our business. Hence, the philosophy of professionalism is foundation stone of our business strategy and we wish to make it more sound and strong in times to come.

Our Products:-

S.No.	Products	Description
1.	Rectified Spirit	Rectified spirit is highly concentrated ethanol purified by means of repeated distillation. It contains 95% alcohol by volume. Rectified Spirit Alcohol is used in mixed drinks, in the production of liquors, for medicinal purposes, and for chemical industry. Rectified Spirit is produced from molasses using yeast in fermentation tanks. Molasses diluted with water to the desired concentration is metered continuously in to a fermented. Spent wash from distillations re-circulated to ferment depending on solids concentration in fermented wash and molasses composition. During fermentation process yeast cells convert sugar in to alcohol. Fermentation is an exothermic reaction, heat is evolved during the fermentation and it is continuously cooled by plate type heat exchanger.
2.	Denatured Spirit	Denatured Spirit is produced by mixing spirits with denaturants in order to render them potable, generally for use in various industrial applications. Denatured Spirit usually is colorless in appearance. Denatured spirit serves as a cleaning agent, fuel additive, sanding aid, exterminator, and as a solvent.
3.	Extra Neutral Alcohol	Extra neutral alcohol (ENA) - is a colorless alcohol with neutral smell and taste. It is distilled from sugarcane molasses. Extra Neutral Alcohol that is produced by re-distillation of rectified spirit, which helps in removing low volatile impurities and high volatile impurities present in it. Extra Neutral Alcohol is the best quality of alcohol which is used for Alcoholic Beverages having lowest impurities to give higher taste. Molasses base Extra Neutral Alcohol is little sweetness in taste. Extra Neutral Alcohol is used as volatile carriers in flavour & Fragrances, potable liquor for human consumption.

MANUFACTURING PROCESS FLOW CHARTS:-

The fermented wash first enters the beer heater, which is condenser for considering alcoholic vapors' by using wash as a cooling medium. The objective of the beer heater is to recover the heat from the hot vapour of alcohol. Wash from the beer heater goes to the analyser column bottom & then goes to top plate of the wash column.

This column consists of 18 plates.

This steam is admitted through the steam sparger situated at the bottom of the column. As the steam rises up, the wash is descending from the top to the bottom of the column gets heated & by the times it reaches to the bottom plate. It contains practically no alcohol. The wash going out is called spent wash, which is discharged to the drainpipe. The vapors coming out of the wash column now consists of approximately 50% water with impurities such as higher alcohols, aldehydes, acids, sulphur dioxide etc.

A part of these vapors are led to the heads concentration column where low boiling impurities are separated from spirits, which is produced a rate of 5-10% of total production depending upon to extent of purity required & stored separately.

Other portion of the vapors', which is the major quality, is led to the rectifying column. This column consists of 44 to 52 plates, which help, in the removal of bad smelling fusel oils, which is a mixture of higher alcohol. As the vapors coming from wash column rise to the top of the rectifying column,, the concentration of alcohol goes on increasing & finally it reaches to the concentration of 95.5% alcohol.

The alcoholic vapors' from the rectified columns are condensed in the beet heater, principle condenser using water as coolant & vent condenser. The condensates of all the three condensers go back to the top of the rectifying column & un- condensed gases are let out from vent pipes. Actual product of rectified spirits drawn from the 3rd plate from the top & cooled in alcohol cooler & taken out as a product.

The fusel oil, which is a mixture of higher alcohols, is drawn from the 6th to 10th plate from the bottom of the rectifying column. Fusel oil being immiscible with water, collects at the top & is decanted through a funnel & sent to storage.

Extra Neutral Alcohol (E.N.A)

Rectified Spirit contains impurities like aldehydes, esters, higher alcohols that are not good for making quality potable alcohol for high grade liquor products like Whisky, Gin, Rum etc. Rectified Spirit is therefore re-distilled with DM (De-mineralized water) and passed through purification column, then rectifier column, condensers etc. All these equipments constitute Extra Neutral Alcohol plant.

Higher alcohols and all other impurities get separated at various temperatures and pure Extra Neutral Alcohol is collected separately and taken to storage vats. Extra Neutral Alcohol can be sold to other distilleries and bottling plants for making quality alcoholic products like Whisky, Gin, Rum etc.

TAX LAWS

State laws governing general sales tax.

As a consequence of the enactment of the Value Added Tax Act, in most of the states in India, the General Sales Tax Act, 1959 has been rendered redundant, since only one of the legislations can operate in the State. The Maharashtra Value Added Tax Act, 2002 has been in force in the state of Maharashtra from the 1st April 2005.

Value Added Tax ("VAT")

VAT is a system of multi-point levy on each of the purchases in the supply chain with the facility of set-off input tax on sales whereby tax is paid at the stage of purchase of goods by a trader and on purchase of raw materials by a manufacturer. VAT is based on the value addition of goods, and the related VAT liability of the dealer is calculated by deducting input tax credit for tax collected on the sales during a particular period. VAT is a consumption tax applicable to all commercial activities involving the production and distribution of goods and the provisions of services, and each state that has introduced VAT has its own VAT Act, under which, persons liable to pay VAT must register and obtain a registration number from Sales Tax Officer of the respective State.

Central Sales Tax Act, 1956

The CST Act formulates principles for determining (a) when a sale or purchase takes place in the course of inter-state trade or commerce; (b) when a sale or purchase takes place outside a State and (c) when a sale or purchase takes place in the course of imports into or export from India. This Act provides for levy, collection and distribution of taxes on sales of goods in the course of inter-state trade or commerce and also declares certain goods to be of special importance in inter-State trade or commerce and specifies the restrictions and conditions to which State laws imposing taxes on sale or purchase of such goods of special importance (called as declared goods) shall be subject. Central Sales tax is levied on inter State sale of goods. Sale is considered to be inter-state when (a) sale occasions movement of goods from one State to another or (b) is effected by transfer of documents during their movement from one State to another.

A sale or purchase of goods shall be deemed to take place in the course of inter-state trade or commerce if the sale or purchase is affected by a transfer of documents of title to the goods during their movement from one state to another. When the goods are handed over to the carrier, he hands over a receipt to the seller. The seller sends the receipt to buyer. The buyer gets delivery of

goods on submission of the receipt to the carrier at other end. The receipt of carrier is 'document of title of goods'. Such document is usually called Lorry Receipt (LR) in case of transport by Road or Air Way Bill (AWB) in case of transport by air. Though it is called Central Sales Tax Act, the tax collected under the Act in each State is kept by that State only. Central Sales Tax is payable in the State from which movement of goods commences (that is, from which goods are sold). The tax collected is retained by the State in which it is collected. The Central Sales Tax Act is administered by sales tax authorities of each State. The liability to pay tax is on the dealer, who may or may not collect it from the buyer.

6. IMPAIRMENT OF ASSETS

The company assesses at each reporting date whether there is an indication that an asset may be impaired. If any indication exists, or when annual impairment testing for an asset is required, the company estimates the asset's recoverable amount. An asset's (including goodwill) recoverable amount is the higher of an asset's net selling price and its value in use. The recoverable amount is determined for an individual asset, unless the asset does not generate cash inflows that are largely independent of those from other assets or groups of assets. Where the carrying amount of an asset exceeds its recoverable amount, the asset is considered impaired and is written down to its recoverable amount. In assessing value in use, the estimated future cash flows are discounted to their present value using a pre-tax discount rate that reflects current market assessments of the time value of money and the risks specific to the asset. In determining net selling price, recent market transactions are taken into account, if available. If no such transactions can be identified, an appropriate valuation model is used.

After impairment, depreciation/ amortization is provided on the revised carrying amount of the asset over its remaining useful life.

7. INVESTMENTS

Investments, which are readily realizable and intended to be held for not more than one year from the date on which such investments are made, are classified as current investments. All other investments are classified as long-term investments.

On initial recognition, all investments are measured at cost. The cost comprises purchase price and directly attributable acquisition charges such as brokerage, fees and duties.

Current investments are carried in the financial statements at lower of cost and fair value determined on an individual investment basis. Long-term investments are carried at cost. However, provision for diminution in value is made to recognize a decline other than temporary in the value of the investments.

On disposal of an investment, the difference between its carrying amount and net disposal proceeds is charged or credited to the statement of profit and loss.

(i) Deferred income taxes reflect the impact of timing differences between taxable income and accounting income originating during the current year and reversal of timing differences for the earlier years. Deferred tax is measured using the tax rates and the tax laws enacted or substantively enacted at the reporting date.

(ii) Deferred tax liabilities are recognized for all taxable timing differences. Deferred tax assets are recognized for deductible timing differences only to the extent that there is reasonable certainty that sufficient future taxable income will be available against which such deferred tax assets can be realized. In situations where the Company has unabsorbed depreciation or carry forward tax losses, all deferred tax assets are recognized only if there is virtual certainty supported by convincing evidence that they can be realized against future taxable profits.

Any such write-down is reversed to the extent that it becomes reasonably certain or virtually certain, as the case may be, that sufficient future taxable income will be available.

RESTRICTIONS ON FOREIGN OWNERSHIP OF INDIAN SECURITIES

Foreign investment in Indian securities is regulated through the Industrial Policy, 1991 of the Government of India and FEMA. While the Industrial Policy, 1991 prescribes the limits and the conditions subject to which foreign investment can be made in different sectors of the Indian economy, FEMA regulates the precise manner in which such investment may be made. Under the Industrial Policy, unless specifically restricted, foreign investment is freely permitted in all sectors of Indian economy up to any extent and without any prior approvals, but the foreign investor is required to follow certain prescribed procedures for making such investment. Foreign investment is allowed up to 100% under automatic route in our Company.

India's current Foreign Direct Investment ("FDI") Policy issued by the Department of Industrial Policy and Promotion, Ministry of Commerce and Industry, GOI ("DIPP") by Consolidated FDI Policy Circular of 2015 with effect from May 12, 2015 ("Consolidated FDI Policy Circular of 2015") consolidates and subsumes all previous press notes, press releases and clarifications on FDI issued by the DIPP. The Government usually updates the consolidated circular on FDI Policy once every Year and therefore, Consolidated FDI Policy Circular of 2015 will be valid until the DIPP issues an updated circular.

Subscription by foreign investors (NRIs/FPIs)

FPIs are permitted to subscribe to Equity Shares of an Indian Company in a public offer without the prior approval of the RBI, so long as the price of the Equity Shares to be issued is not less than the price at which the Equity Shares are issued to residents. SEBI registered FPIs have been permitted to purchase shares of an Indian company through offer, subject to total FPI investment being within the individual FPI/sub account investment limit of 10 per cent subject to the total sectoral cap of all FPIs/sub-accounts put together being 24 per cent of the paid-up capital of the Indian company.

The transfer of shares between an Indian resident and a Non-resident does not require prior approval of FIPB or RBI, subject to fulfillment of certain conditions as specified by DIPP / RBI, from time to time. Such conditions include (i) the activities of the investee company are under the automatic route under the foreign direct investment ("FDI") Policy and the non-resident shareholding is within the sectoral limits under the FDI policy; and (ii) the pricing is in accordance with the guidelines prescribed by the SEBI/RBI. Investors are advised to refer to the exact text of the relevant statutory provisions of law before investing and / or subsequent purchase or sale transaction in the Equity Shares of Our Company.
